

## 100329

### Low Power Octal ECL/TTL Bidirectional Translator with Register

#### General Description

The 100329 is an octal registered bidirectional translator designed to convert TTL logic levels to 100K ECL logic levels and vice versa. The direction of the translation is determined by the DIR input. A LOW on the output enable input (OE) holds the ECL outputs in a cut-off state and the TTL outputs at a high impedance level. The outputs change synchronously with the rising edge of the clock input (CP) even though only one output is enabled at the time.

The cut-off state is designed to be more negative than a normal ECL LOW level. This allows the output emitter-followers to turn off when the termination supply is -2.0V, presenting a high impedance to the data bus. This high impedance reduces the termination power and prevents loss of low state noise margin when several loads share the bus.

The 100329 is designed with FAST™ TTL output buffers, featuring optimal DC drive and capable of quickly charging and discharging highly capacitive loads. All inputs have 50 kΩ pull-down resistors.

#### Features

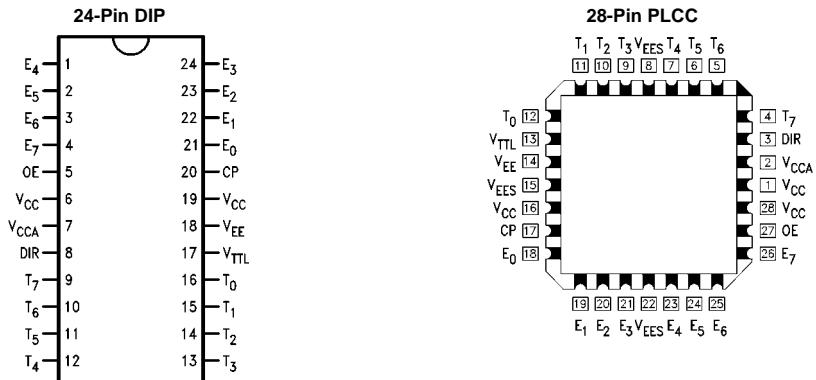

- Bidirectional translation
- ECL high impedance outputs
- Registered outputs
- FAST TTL outputs
- 3-STATE outputs
- Voltage compensated operating range = -4.2V to -5.7V
- High drive IOS

#### Ordering Code:

Order Number	Package Number	Package Description
100329PC	N24E	24-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-010, 0.400 Wide
100329QC	V28A	28-Lead Plastic Lead Chip Carrier (PLCC), JEDEC MO-047, 0.450 Square
100329QI	V28A	28-Lead Plastic Lead Chip Carrier (PLCC), JEDEC MO-047, 0.450 Square Industrial Temperature Range (-40°C to +85°C)

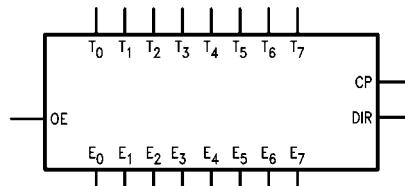

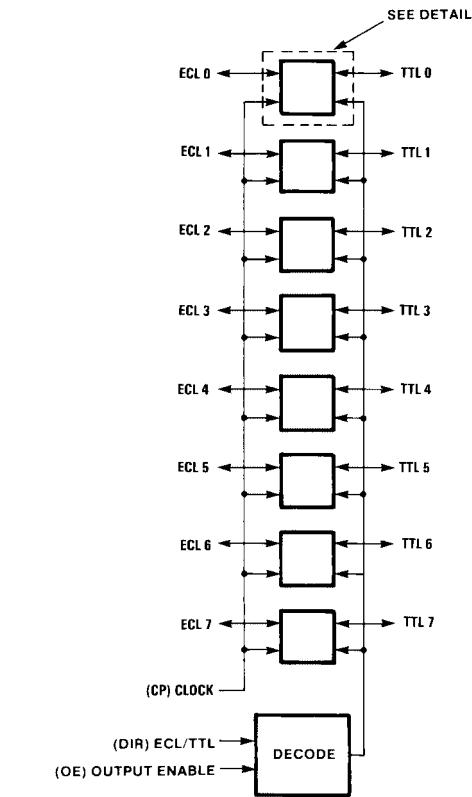

Devices also available in Tape and Reel. Specify by appending suffix letter "X" to the ordering code.

**Recommended Operating Conditions**

Case Temperature ( $T_C$ )	0°C to +85°C
ECL Supply Voltage ( $V_{EE}$ )	-5.7V to -4.2V
TTL Supply Voltage ( $V_{TTL}$ )	+4.5V to +5.5V

**Note 4:** The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

**Note 5:** ESD testing conforms to MIL-STD-883, Method 3015.

**Note 6:** Either voltage limit or current limit is sufficient to protect inputs.

### Test Circuitry (TTL-to-ECL)

Note 11:  $R_T = 50\Omega$  termination resistive load. When an input or output is being monitored by a scope,  $R_T$  is supplied by the scope's  $50\Omega$  input resistance. When an input or output is not being monitored, an external  $50\Omega$  resistance must be applied to serve as  $R_T$ .

Note 12: TTL and ECL force signals are brought to the DUT via  $50\Omega$  coax lines.
