	$I_{SLD2}$	T39A T4A	T23A	Same as above (however, S24 = 1)   $I_{SLD2} = VOS2/1 \text{ k}\Omega$		135		$\mu\text{A}$
2fsc output level	V2fsc		T21	In PB mode, measure the T21 output level with an FET probe	480	640	800	mVp-p

Note) A trap (4.84 MHz for NTSC systems and 5.69 MHz for PAL systems) is required in the chroma playback system (between pins 25 and 27 or between pins 31 and 29) in order to suppress unnecessary components in converter output.
