

XC6372

Series

Dual Mode [PWM/PFM] Step - Up DC/DC Controllers/Converters

- ◆CMOS Low Power Consumption
- ◆Operating Voltage : 0.9V~10.0V
- ◆Output Voltage Range : 2.0V~7.0V
- ◆Output Voltage Accuracy : $\pm 2.5\%$
- ◆Selectable Oscillator Frequency : 50kHz, 100kHz, 180kHz

General Description

The XC6372 series, unlike the conventional PWM controlled converters, are a group of step-up DC/DC converters that automatically change their operation modes into PFM modes while loads are light, such as when the duty ratios are less than 10%.

When loads are light, as in the stand-by mode, the XC6372 changes to PFM control so as to decrease oscillator frequencies, resulting in reduced supply current.

Therefore, the XC6372 is suitable for use with portable equipment that requires the PWM controlled performance of low ripple and high output current, and a supply current that varies between low and high. Built-in proprietary phase compensation and soft start-up circuits ensure excellent transient response and improved performance.

Output voltage can be selected from 2.0V to 7.0V in 0.1V increments (accuracy: $\pm 2.5\%$). Oscillator frequency is also selectable from three frequencies; 50, 100, and 180kHz (accuracy: $\pm 15\%$).

Every built-in switching transistor type enables a step-up circuit to be configured using only three external components; a coil, a diode, and a capacitor. External transistor versions are available to accommodate high output current applications.

SOT-89 small package.

Typical Application Circuit

Applications

- Cellular phones, pagers
- Palmtops
- Cameras, video recorders
- Portable equipment

Features

Operating (start-up) voltage range

: 0.9V~10V

Output voltage range

: 2.0V~7.0V in 0.1V increments

Highly accurate

: Set-up voltage $\pm 2.5\%$

Oscillator frequency

: 50kHz, 100kHz, 180kHz ($\pm 15\%$)

selectable

Maximum output currents (Tr built-in)

: Typ.100mA @ $V_{IN}=3.0$,

$V_{OUT}=5.0V$Note(1)

Highly efficient (Tr built-in)

: Typ.85% @ $V_{IN}=3.0V$,

$V_{OUT}=5.0V$Note(1)

Both switching transistor built-in and external Tr types are available.

Five-lead packaged units offer either Chip Enable or independent Vout pin option.

Phase compensation and soft startup circuits included.

Small package

: SOT-89 mini-power mold (3-pin, 5-pin)

Note(1): Performance depends on external components and PCB layout.

SD : MA2Q735 (Schottky diode; MATSUSHITA)
CL : 16V 47 μ F (Tantalum capacitor, NICHICON, MCE)
CIN : 16V 220 μ F (Aluminium Electrolytic Capacitor)
R : 1k Ω , **CB**:3300pF (F_{osc} =100kHz)
Tr : 2SC3279, 2SD1628G

Fig-6 XC6372F Application

4

Typical Performance Characteristics

(1) OUTPUT VOLTAGE vs. OUTPUT CURRENT

(2) EFFICIENCY vs. OUTPUT CURRENT

(3) RIPPLE VOLTAGE vs. OUTPUT CURRENT

(4) NO LOAD INPUT CURRENT vs. INPUT VOLTAGE
