The EDI88130CS is a high speed, high performance, 128Kx8 bits monolithic Static RAM.

An additional chip enable line provides system memory security during power down in non-battery backed up systems and memory banking in high speed battery backed systems where large multiple pages of memory are required.

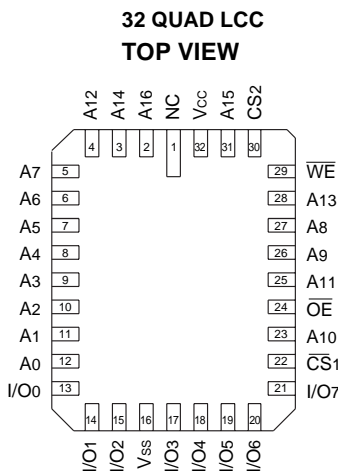

The EDI88130CS has eight bi-directional input-output lines to provide simultaneous access to all bits in a word.

A low power version, EDI88130LPS, offers a 2V data retention function for battery back-up applications.

Military product is available compliant to MIL-PRF-38535.
