

Compact, high precision, high heat resistant rotary sensors, meet various needs in position detection.

Magnetic Sensor

Piezo Sensor

Resistive Sensor

Features

- Uses potentiometer system.
- Analog output facilitates signal processing.
- Provides stable output characteristics against external noise and temperature changes.

Applications

- Rotation angle detecting sensors in car air conditioners, projectors, digital cameras and photo copiers
- Joint angle detections in robots
- Digital video cameras
- Car navigation systems

Typical Specifications

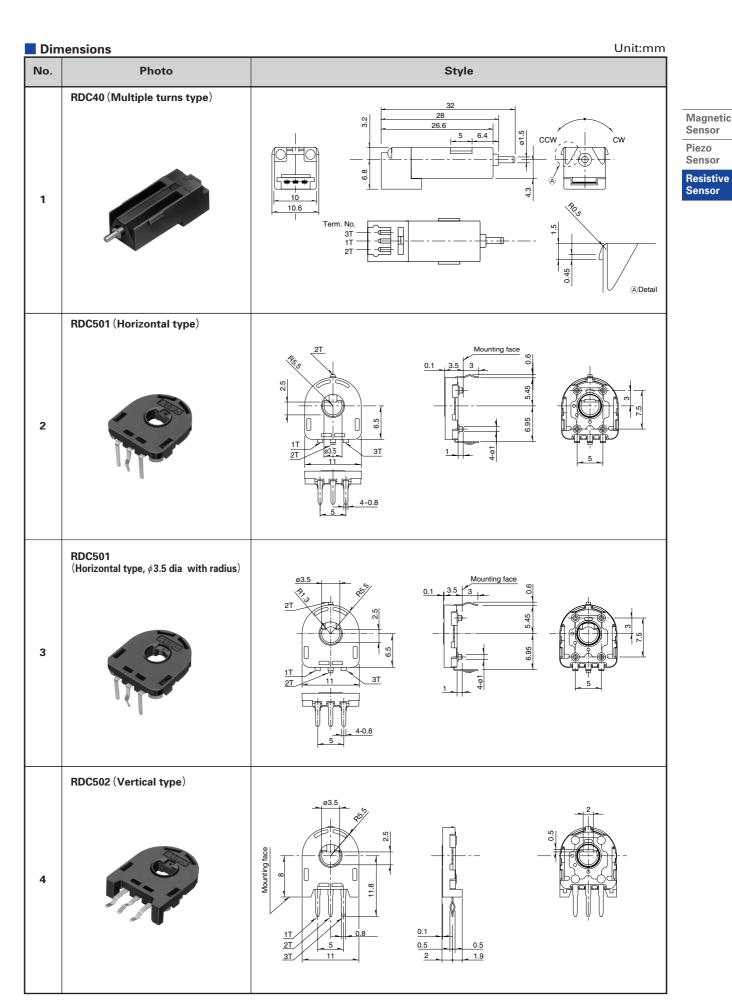

i ypicai opecinications	
Items	Specifications
Rating voltage	5V DC
Rotational torque	2mN•m max.
Operating life	1,000,000cycles (RDC40:100,000cycles)
Total resistance	10kΩ
Total resistance tolerance	±30%

Product List

Mounting method	Effective variable range	Linearity	Hollow shaft variation	Operating life (cycles)	Model No.	Minimum packing unit (pcs.) *	Drawing No.
Connector type	13rotations	±1%	_	100,000	RDC401D07A	770	1
Horizontal type			φ 3.5 dia		RDC501015A	1,500	2
nonzontai type			ϕ 3.5 dia with radius		RDC501011A	1,500	3
Vertical type	320°	±2%	φ 3.5 dia	1,000,000	RDC502006A	1,600	4
Reflow type	320			φ 3.5 dia	1,000,000	RDC503013A	1,300
hellow type			ϕ 3.5 dia with radius		RDC503015A	1,300	6
Reflow type(Low-profile)			φ4 dia		RDC506002A	1,200	7

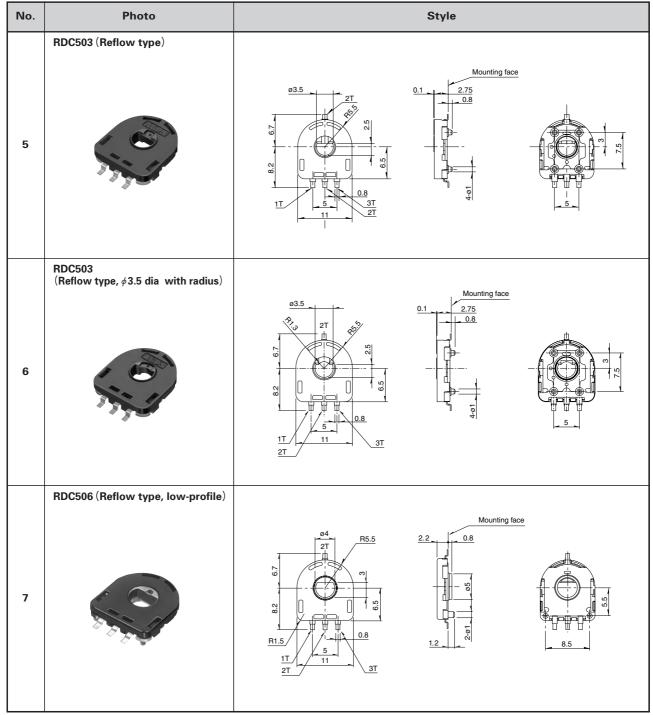

Notes

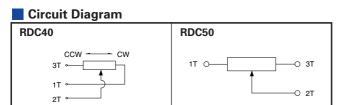

- 1. Additional product specifications in response to those not included in the above recommended products are also available.
- %The minimum packing unit is the basic unit quantity of your order. Please place purchase orders in integer multiples of the minimum packing unit. Please conact us for export packaging details.

performance	Rotational torque	2mN•r	m max. 10mN·m max.			
	Operating force			0.25N max.	2N less.	
	100,000cycles	•		•		•
Durability	200,000cycles				•	
	1,000,000cycles		•			

Method for Regulating the Linearity

With rated voltage applied between terminals 1 and 3, the straight line which connects the measured output values VB and VA at specified reference positions B and A is assumed to be an ideal straight line, so that deviation against the ideal straight line when the voltage applied between terminals 1 and 3 is assumed to be 100% can be expressed as a percentage.

Model RDC10/RD7

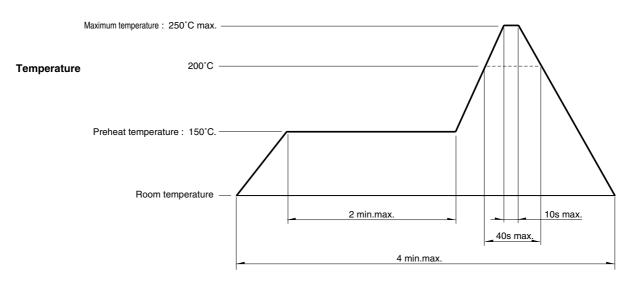

Soldering Conditions

Soldering Conditions

1. Recommended reflow conditions

Magnetic Sensor Piezo Sensor

Resistive Sensor

- 2. Cleaning Cleaning should not be attempted.
- 3. Type of solder to be used Use cream solder that contains 10 15 %wt flux.
- 4. Number of solder applications apply solder only once

Notes

- 1. When using an infrared reflow oven, solder may not always be applied as intended. Be sure to use a hot air reflow oven or a type that uses infrared rays in combination with hot air.
- 2. The temperatures given above are the maximum temperatures at the terminals of the potentiometer when employing a hot air reflow method. The temperature of the PC board and the surface temperature of the potentiometer may vary greatly depending on the PC board material, its size and thickness. Ensure that the surface temperature of the potentiometer does not rise to 250°C or greater.
- 3. Conditions vary to some extent depending on the type of reflow bath used. Be sure to give due consideration to this prior to use.

Measurement and Test Methods

Analog Output Contact Type Sensor -

[Total Resistance]

The total resistance, with the shaft (lever) placed at the end of terminal 1 or 3, shall be determined by measuring the resistance between the resistor terminals 1 and 3 unless otherwise specified.

[Rating Voltage]

The rating voltage corresponding to the rated power shall be determined by the following equation. When the resulting rated voltage exceeds the maximum operating voltage of a specific resistor, the maximum operating voltage shall be taken as the rated voltage.

E=√P•R
$ \begin{array}{c} \text{E:Rated voltage (V)} \\ \text{P:Rated power (W)} \\ \text{R:Total nominal resistance } (\Omega) \end{array} $
