

# 8-bit Proprietary Microcontroller

CMOS

# F<sup>2</sup>MC-8L MB89640 Series

## MB89643/645/646/647/P647/PV640

### ■ DESCRIPTION

The MB89640 series has been developed as a general-purpose version of the F<sup>2</sup>MC\*-8L family consisting of proprietary 8-bit, single-chip microcontrollers.

In addition to a compact instruction set, the microcontrollers contain a variety of peripheral functions such as dual-clock control system, five operating speed control stages, timers, a PWM timer, serial interface, an A/D converter, a D/A converter, an external interrupt, and a watch prescaler.

\*: F<sup>2</sup>MC stands for FUJITSU Flexible Microcontroller.

### ■ FEATURES

- F<sup>2</sup>MC-8L family CPU core

Instruction set optimized for controllers

Multiplication and division instructions  
16-bit arithmetic operations  
Test and branch instructions  
Bit manipulation instructions, etc.

(Continued)

### ■ PACKAGE

80-pin Plastic QFP

(FPT-80P-M11)

80-pin Plastic QFP

(FPT-80P-M06)

80-pin Ceramic MQFP

(MQP-80C-P01)

# MB89640 Series

*(Continued)*

- Six types of timers
  - 8-bit PWM timer: 2 channels (also usable reload timer)
  - 8-bit pulse width counter (continuous measurement capable and applicable to remote control)
  - 16-bit timer/counter
  - 21-bit time-base counter
  - 15-bit watch prescaler
- Two 8-bit serial I/O
  - Swichable transfer direction allows communication with various equipment.
- 8-bit A/D converter: 8 channels
  - Sense mode function enabling comparison at 12 instructions
  - Activation by external input capable
- External interrupt 1, external interrupt 2: 9 channels
- 8-bit D/A converter: 2 channels
  - 8-bit R-2R type
- Low-power consumption modes (stop mode, sleep mode, watch mode, subclock mode)
- Bus interface functions
  - Including hold and ready functions

# MB89640 Series

## ■ PRODUCT LINEUP

Part number Parameter	MB89643	MB89645	MB89646	MB89647	MB89P647	MB89PV640
Classification	Mass production products (mask ROM products)				One-time PROM product	Piggyback/ evaluation product for evaluation and development
ROM size	8 K × 8 bits (internal mask ROM)	16 K × 8 bits (internal mask ROM)	24 K × 8 bits (internal mask ROM)	32 K × 8 bits (internal mask ROM)	32 K × 8 bits (internal PROM, programming with general-purpose programmer)	32 K × 8 bits (external ROM)
RAM size	256 × 8 bits	512 × 8 bits	768 × 8 bits	1 K × 8 bits		
CPU functions	Number of instructions: 136 Instruction bit length: 8 bits Instruction length: 1 to 3 bytes Data bit length: 1, 8, 16 bits Minimum execution time: 0.4 μs/10 MHz to 6.4 μs/10 MHz, or 61.0 μs/32.768 kHz Interrupt processing time: 3.6 μs/10 MHz to 57.6 μs/10 MHz, or 562.5 μs/32.768 kHz					
Ports	Input ports (CMOS): 9 (All also serve as a external interrupt.) Output ports (CMOS): 8 (All also serve as a bus control.) I/O ports (CMOS): 24 (8 ports also serve as peripherals, 16 ports also serve as a bus control.) I/O ports (N-ch open-drain): 8 (All also serve as peripherals.) Output ports (N-ch open-drain): 16 (8 ports also serve as peripherals.) Total: 65					
Clock timer	21 bits × 1 (in main clock mode), 15 bits × 1 (at 32.768 kHz)					
8-bit PWM timer	8-bit reload timer operation × 2 channels 7/8-bit resolution PWM operation × 2 channels 8-bit PPG operation × 1 channel					
8-bit pulse width counter	8-bit timer operation (overflow output capable) 8-bit reload timer operation (toggled output capable) 8-bit pulse width measurement operation (Continuous measurement capable, measurement of "H" width/"L" width/from ↑ to ↓/from ↓ to ↑ capable)					
16-bit timer/ counter	16-bit timer operation 16-bit event counter operation					
8-bit serial I/O	8 bits × 2 channels LSB first/MSB first selectability One clock selectable from four transfer clocks (one external shift clock, three internal shift clocks: 0.8 μs, 3.2 μs, 12.8 μs)					
8-bit A/D converter	8-bit resolution × 8 channels A/D conversion mode (conversion time: 44 instructions) Sense mode (conversion time: 12 instructions) Continuous activation by an external activation or an internal timer capable Reference voltage input

FPT-80P-M06	○	×
MQP-80C-P01	×	○

○ : Available    × : Not available

Note: For more information about each package, see section “■ External Dimensions.”

## ■ DIFFERENCES AMONG PRODUCTS

### 1. Memory Size

Before evaluating using the piggyback product, verify its differences from the product that will actually be used. Take particular care on the following points:

- On the MB89643 register banks 16 to 32 cannot be used.
- On the MB89P647, the program area starts from address 8007<sub>H</sub> but on the MB89PV640 and MB89647 starts from 8000<sub>H</sub>.

(On the MB89P647, addresses 8000<sub>H</sub> to 8006<sub>H</sub> comprise the option setting area, option settings can be read by reading these addresses. On the MB89PV640 and MB89647, addresses 8000<sub>H</sub> to 8006<sub>H</sub> could also be used as a program ROM. However, do not use these addresses in order to maintain compatibility of the MB89P647.)

- The stack area, etc., is set at the upper limit of the RAM.
- The external areas are used.

### 2. Current Consumption

- In the case of the MB89PV640, add the current consumed by the EPROM which is connected to the top socket.
- When operated at low speed, the product with an OTPROM (one-time PROM) or an EPROM will consume more current than the product with a mask ROM.
- However, the current consumption in sleep/stop modes is the same. (For more information, see sections “■ Electrical Characteristics” and “■ Example Characteristics.”)

### 3. Mask Options

Functions that can be selected as options and how to designate these options vary by the product.

Before using options check section “■ Mask Options.”

Take particular care on the following points:

- A pull-up resistor cannot be set for P40 to P47 and P50 to P57 on the MB89P647.
- For all products, P60 to P67 are available for no pull-up resistor when an A/D converter is used.
- For all products, P50 to P57 are available for no pull-up resistor when a D/A converter is used.
- Options are fixed on the MB89PV640.

## ■ PIN DESCRIPTION

Pin no.		Pin name	Circuit type	Function
QFP*1	QFP*2 MQFP*3			
11	13	X0	A	Main clock crystal oscillator pins (Max. 10 MHz)
12	14	X1		
9	11	MOD0	C	Operating mode selection pins Connect directly to V <sub>CC</sub> or V <sub>SS</sub> .
10	12	MOD1		
14	16	$\overline{\text{RST}}$	D	Reset I/O pin This pin is an N-ch open-drain output type with pull-up resistor, and a hysteresis input type. "L" is output from this pin by an internal reset source. The internal circuit is initialized by the input of "L".
38 to 31	40 to 33	P00/AD0 to P07/AD7	E	General-purpose I/O ports Also serve as multiplex pins of lower address output and data I/O.
30 to 23	32 to 25	P10/A08 to P17/A15	E	General-purpose I/O ports Also serve as an upper address output.
22, 21, 18, 15	24, 23, 20, 17	P20/BUFC, P21/HAK, P24/CLK, P27/ALE	G	General-purpose output-only ports Also serve as a bus control signal output.
20, 19	22, 21	P22/HRQ, P23/RDY	E	General-purpose output-only ports Also serve as a bus control signal input.
17, 16	19, 18	P25/ $\overline{\text{WR}}$ , P26/ $\overline{\text{RD}}$	E	General-purpose output-only ports Also serve as a bus control signal output.
46	48	P30/ADST	F	General-purpose I/O port Also serves as an A/D converter external activation. This port is a hysteresis input type.
45	47	P31/SCK1	F	General-purpose I/O port Also serves as the clock I/O for the serial I/O 1. This port is a hysteresis input type.
44, 43	46, 45	P32/SO1, P33/SI1	F	General-purpose I/O ports Also serve as the data output for the serial I/O 1. These ports are a hysteresis input type.
42	44	P34/EC	F	General-purpose I/O port Also serves as the external clock input for the 16-bit timer/counter. This port is a hysteresis input type.

Pin no.		Pin name	Circuit type	Function
QFP <sup>*1</sup>	QFP <sup>*2</sup> MQFP <sup>*3</sup>			
41	43	P35/PWC	F	General-purpose I/O port Also serves as the measured pulse input for the 8-bit pulse width counter. This port is a hysteresis input type.
40	42	P36/WTO	F	General-purpose I/O port Also serves as the toggle output for the 8-bit pulse width counter. This port is a hysteresis input type.
39	41	P37/PTO1	F	General-purpose I/O port Also serves as the toggle output for the 1-channel PWM timer.
55, 54, 52 to 47	57, 56, 54 to 49	P40 to P47	L	N-ch medium-voltage open-drain output-only ports
64	66	P50/DA1	K	N-ch open-drain I/O port Also serves as a D/A channel 1 output. This port is a hysteresis input type.
63	65	P51/DA2	K	N-ch open-drain I/O port Also serves as a D/A channel 2 output. This port is a hysteresis input type.
62	64	P52/PWM	H	N-ch open-drain I/O port Also serves as the PWM output by the two PWM timers. This port is a hysteresis input type.
61	63	P53/PTO2	H	N-ch open-drain I/O port Also serves as the toggle output for the 2-channel PWM timer. This port is a hysteresis input type.
60	62	P54/BZ	H	N-ch open-drain I/O port Also serves as a buzzer output. This port is a hysteresis input type.
59	61	P55/SCK2	H	N-ch open-drain I/O port Also serves as the clock I/O for the serial I/O 2. This port is a hysteresis input type.
58	60	P56/SO2	H	N-ch open-drain I/O port Also serves as the data output for the serial I/O 2. This port is a hysteresis input type.
57	59	P57/SI2	H	N-ch open-drain I/O port Also serves as the data input for the serial I/O 2. This port is a hysteresis input type.
77 to 70	79 to 72	P60/AN0 to P67/AN7	I	N-ch open-drain output-only ports Also serve as the analog input for the A/D converter. These ports are a hysteresis input type.
2, 1, 80 to 78	4 to 1, 80	P70/LI0 to P74/LI4	J	Input-only ports Also serve as external interrupt 1 input. These ports are a hysteresis input type.

## ■ HANDLING DEVICES

### 1. Preventing Latchup

Latchup may occur on CMOS ICs if voltage higher than  $V_{CC}$  or lower than  $V_{SS}$  is applied to input and output pins other than medium- to high-voltage pins or if higher than the voltage which shows on “1. Absolute Maximum Ratings” in section “■ Electrical Characteristics” is applied between  $V_{CC}$  and  $V_{SS}$ .

When latchup occurs, power supply current increases rapidly and might thermally damage elements. When using, take great care not to exceed the absolute maximum ratings.

Also, take care to prevent the analog power supply ( $AV_{CC}$  and  $AVRH$ ) and analog input from exceeding the digital power supply ( $V_{CC}$ ) when the analog system power supply is turned on and off.

### 2. Treatment of Unused Input Pins

Leaving unused input pins open could cause malfunctions. They should be connected to a pull-up or pull-down resistor.

### 3. Treatment of Power Supply Pins on Microcontrollers with A/D and D/A Converters

Connect to be  $AV_{CC} = DAVC = V_{CC}$  and  $AV_{SS} = AVRH = V_{SS}$  even if the A/D and D/A converters are not in use.

### 4. Treatment of N.C. Pins

Be sure to leave (internally connected) N.C. pins open.

### 5. Power Supply Voltage Fluctuations

Although  $V_{CC}$  power supply voltage is assured to operate within the rated range, a rapid fluctuation of the voltage could cause malfunctions, even if it occurs within the rated range. Stabilizing voltage supplied to the IC is therefore important. As stabilization guidelines, it is recommended to control power so that  $V_{CC}$  ripple fluctuations (P-P value) will be less than 10% of the standard  $V_{CC}$  value at the commercial frequency (50 to 60 Hz) and the transient fluctuation rate will be less than 0.1 V/ms at the time of a momentary fluctuation such as when power is switched.

### 6. Precautions when Using an External Clock

Even when an external clock is used, oscillation stabilization time is required for power-on reset (optional) and wake-up from stop mode.

# MB89640 Series

## ■ PROGRAMMING TO THE EPROM ON THE MB89P647

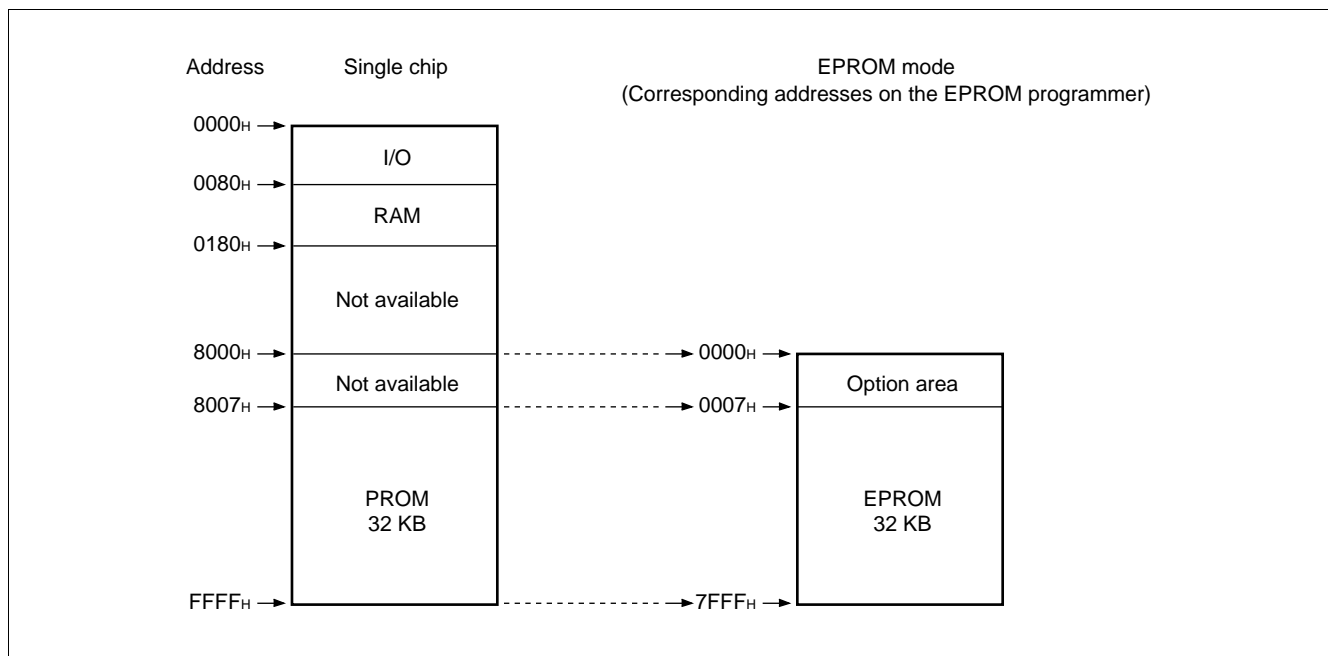

The MB89P647 is an OTPROM version of the MB89640 series.

### 1. Features

- 32-Kbyte PROM on chip
- Options can be set using the EPROM programmer.
- Equivalency to the MBM27C256A in EPROM mode (when programmed with the EPROM programmer)

### 2. Memory Space

Memory space in each mode such as 32-Kbyte PROM, option area is diagrammed below.

#### • Precautions

- (1) The program area of the MB89P647 is 7 bytes smaller than that of the MB89PV640 and MB89647 to provide an option area. Note this point during program development.
- (2) During normal operation, the option data is read when the option area is read from the CPU.

### 3. Programming to the EPROM

In EPROM mode, the MB89P647 functions equivalent to the MBM27C256A. This allows the PROM to be programmed with a general-purpose EPROM programmer (the electronic signature mode cannot be used) by using the dedicated socket adapter.

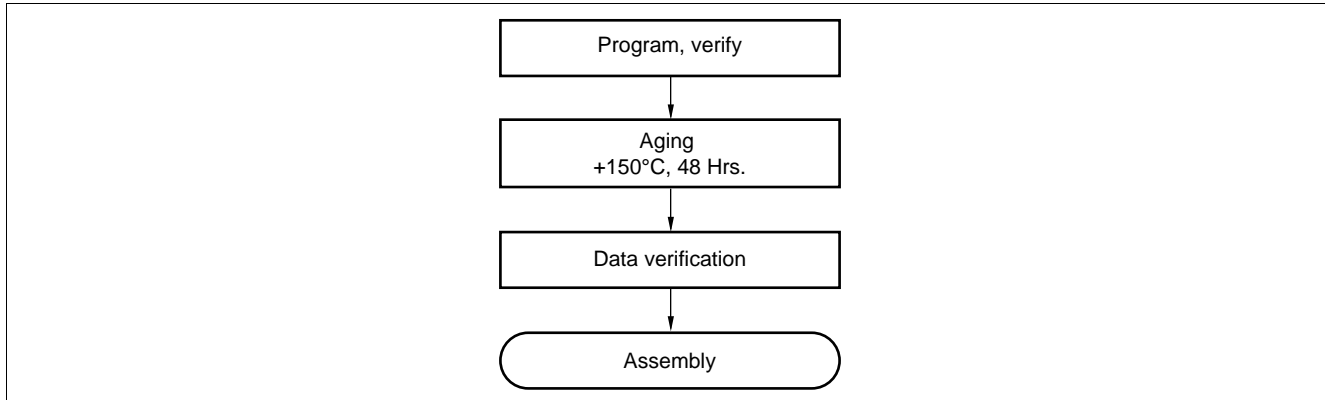

#### • Programming procedure

- (1) Set the EPROM programmer to the MBM27C256A.
- (2) Load program data into the EPROM programmer at 0007H to 7FFFH (note that addresses 8007H to FFFFH while operating as internal ROM mode assign to 0007H to 7FFFH in EPROM mode). Load option data into addresses 0000H to 0006H of the EPROM programmer. (For information about each corresponding option, see "7. Setting OTPROM Options.")
- (3) Program with the EPROM programmer.

## 4. Recommended Screening Conditions

High-temperature aging is recommended as the pre-assembly screening procedure for a product with a blanked OTPROM microcomputer program.

## 5. Programming Yield

All bits cannot be programmed at Fujitsu shipping test to a blanked OTPROM microcomputer, due to its nature. For this reason, a programming yield of 100% cannot be assured at all times.

## 6. EPROM Programmer Socket Adapter

Package	Compatible socket adapter
FPT-80P-M06	ROM-80QF-28DP-8L2
FPT-80P-M11	ROM-80QF2-28DP-8L

Inquiry: Sun Hayato Co., Ltd.: TEL 81-3-3802-5760

Note: Depending on the EPROM programmer, inserting a capacitor of about 0.1  $\mu$ F between  $V_{PP}$  and  $V_{SS}$  or  $V_{CC}$  and  $V_{SS}$  can stabilize programming operations.

# MB89640 Series

## 7. Setting OTPROM Options

The programming procedure is the same as that for the PROM. Options can be set by programming values at the addresses shown on the memory map. The relationship between bits and options is shown on the following bit map:

• **OTPROM option bit map**

	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
0000 <sub>H</sub>	Vacancy Readable and writable	Vacancy Readable and writable	Vacancy Readable and writable	Single/dual-clock system 1: Dual clock 2: Single clock	Reset pin output 1: Yes 2: No	Power-on reset 1: Yes 2: No	Oscillation stabilization time 00: 2 <sup>4</sup> /F <sub>CH</sub> 10: 2 <sup>14</sup> /F <sub>CH</sub> 01: 2 <sup>17</sup> /F <sub>CH</sub> 11: 2 <sup>18</sup> /F <sub>CH</sub>

0005 <sub>H</sub>	Vacancy Readable and writable	Vacancy Readable and writable	Vacancy Readable and writable	P74 Pull-up 1: No 0: Yes	P73 Pull-up 1: No 0: Yes	P72 Pull-up 1: No 0: Yes	P71 Pull-up 1: No 0: Yes	P70 Pull-up 1: No 0: Yes
0006 <sub>H</sub>	Vacancy Readable and writable	Vacancy Readable and writable	Vacancy Readable and writable	Vacancy Readable and writable	P83 Pull-up 1: No 0: Yes	P82 Pull-up 1: No 0: Yes	P81 Pull-up 1: No 0: Yes	P80 Pull-up 1: No 0: Yes

- Notes:
- Set each bit to 1 to erase.
  - Do not write 0 to the vacant bit.  
The read value of the vacant bit is 1, unless 0 is written to it.

## ■ PROGRAMMING TO THE EPROM WITH PIGGYBACK/EVALUATION DEVICE

### 1. EPROM for Use

MBM27C256A-20TV

### 2. Programming Socket Adapter

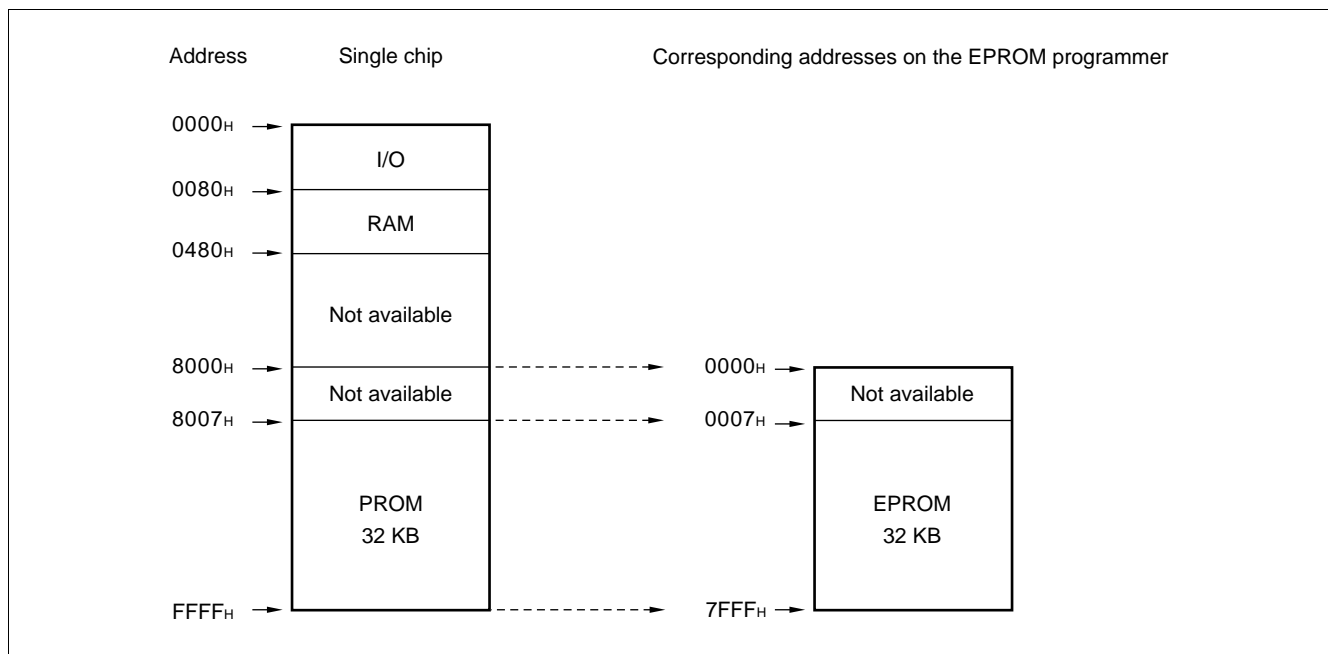

To program to the PROM using an EPROM programmer, use the socket adapter (manufacturer: Sun Hayato Co., Ltd.) listed below.

Package	Adapter socket part number
LCC-32 (Rectangle)	ROM-32LC-28DP-YG

Inquiry: Sun Hayato Co., Ltd.: TEL 81-3-3802-5760

### 3. Memory Space

Memory space in each mode, such as 32-Kbyte PROM is diagrammed below.

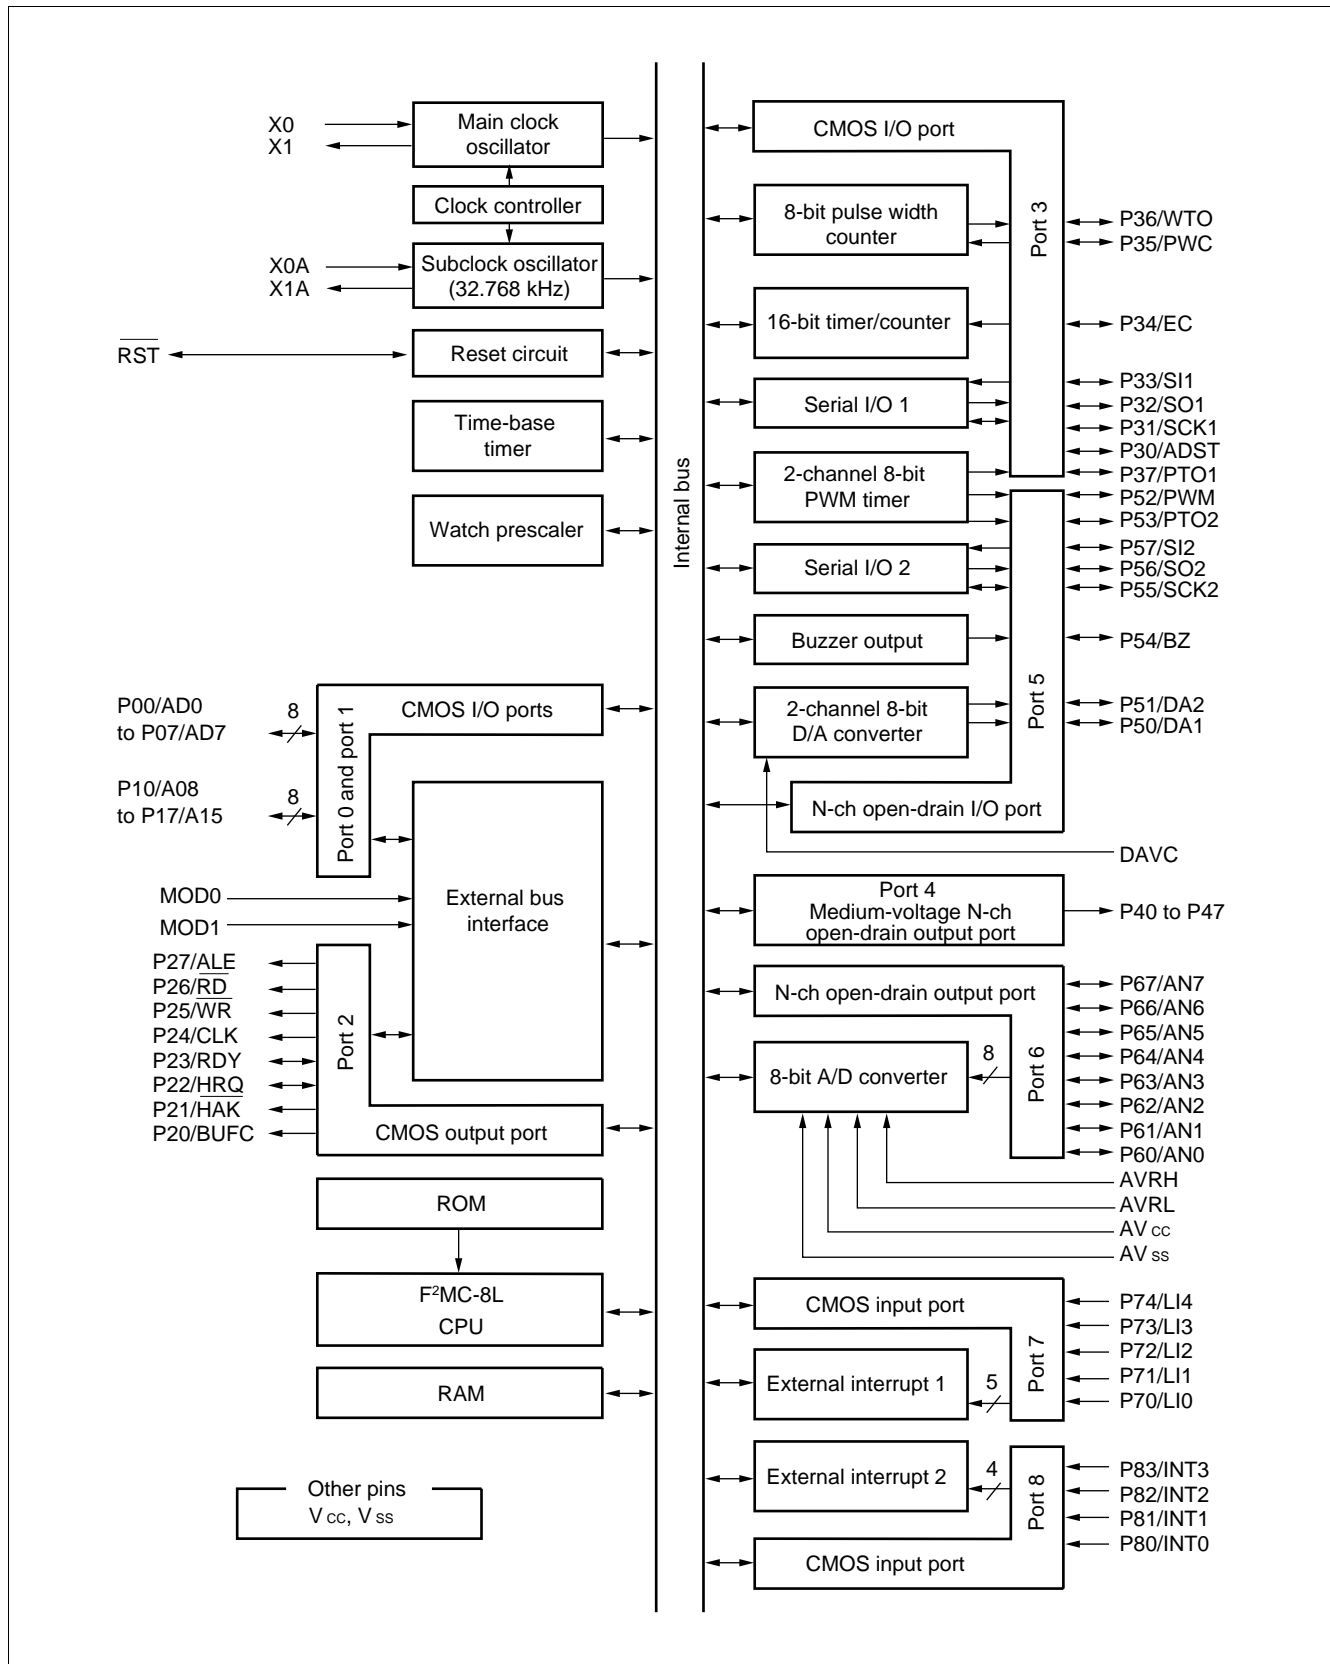

### 4. Programming to the EPROM

- (1) Set the EPROM programmer to the MBM27C256A.
- (2) Load program data into the EPROM programmer at 0007<sub>H</sub> to 7FFF<sub>H</sub>.
- (3) Program to 0000<sub>H</sub> to 7FFF<sub>H</sub> with the EPROM programmer.

# MB89640 Series

## ■ BLOCK DIAGRAM

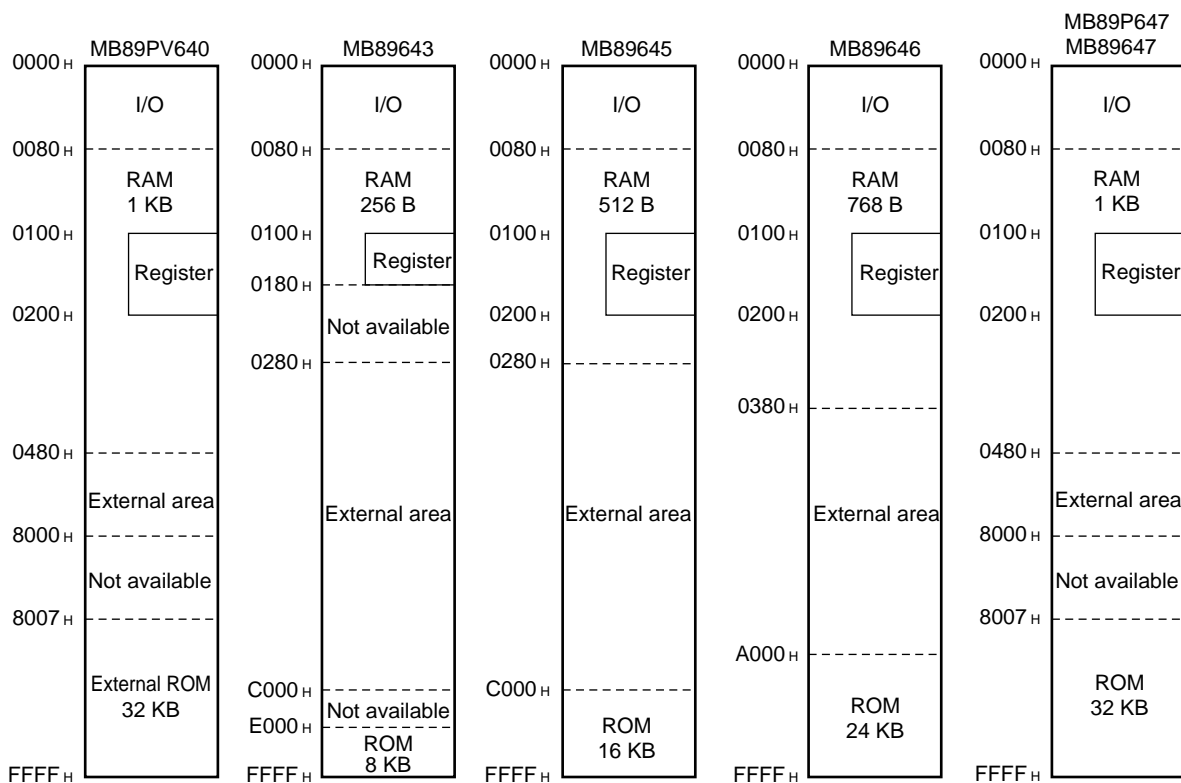

## ■ CPU CORE

### 1. Memory Space

The microcontrollers of the MB89640 series offer a memory space of 64 Kbytes for storing all of I/O, data, and program areas. The I/O area is located at the lowest address. The data area is provided immediately above the I/O area. The data area can be divided into register, stack, and direct areas according to the application. The program area is located at exactly the opposite end, that is, near the highest address. Provide the tables of interrupt reset vectors and vector call instructions toward the highest address within the program area. The memory space of the MB89640 series is structured as illustrated below.

#### Memory Space

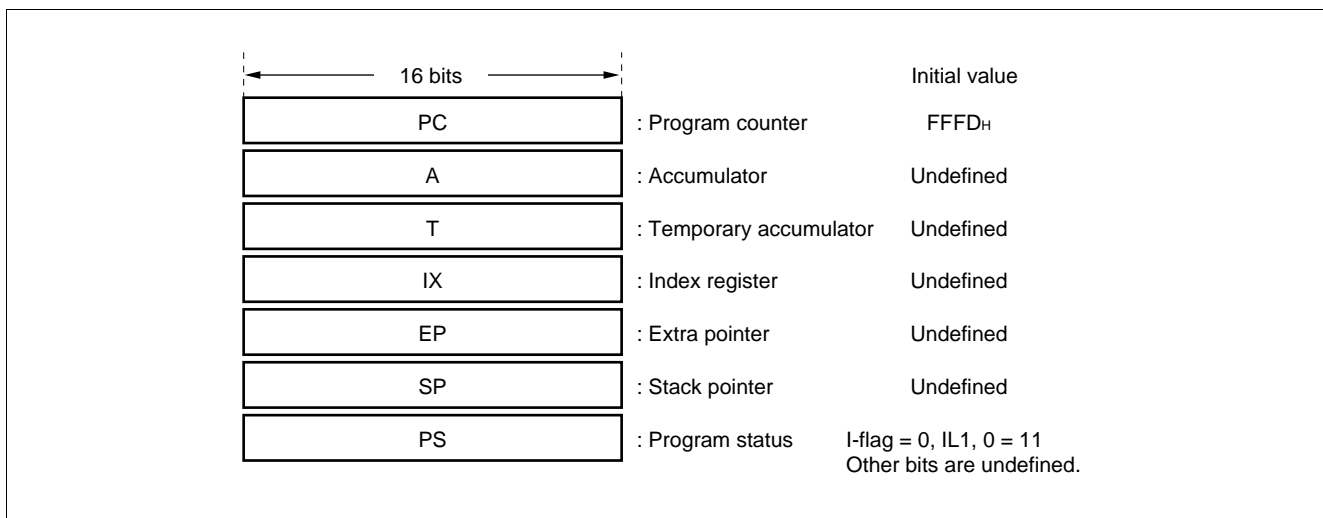

Note: Since addresses 8000<sub>H</sub> to 8006<sub>H</sub> for the MB89P647 comprise an option area, do not use this area for the MB89PV640 and MB89647.

# MB89640 Series

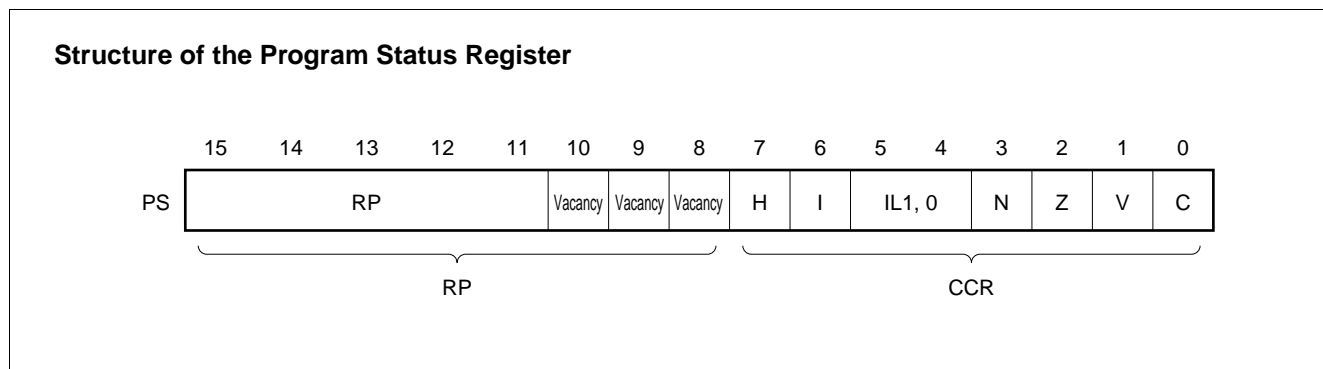

## 2. Registers

The F<sup>2</sup>MC-8L family has two types of registers; dedicated registers in the CPU and general-purpose registers in the memory. The following dedicated registers are provided:

- Program counter (PC):           A 16-bit register for indicating instruction storage positions
- Accumulator (A):                A 16-bit temporary register for storing arithmetic operations, etc. When the instruction is an 8-bit data processing instruction, the lower byte is used.
- Temporary accumulator (T):    A 16-bit register which performs arithmetic operations with the accumulator. When the instruction is an 8-bit data processing instruction, the lower byte is used.
- Index register (IX):            A 16-bit register for index modification
- Extra pointer (EP):             A 16-bit pointer for indicating a memory address
- Stack pointer (SP):            A 16-bit register for indicating a stack area
- Program status (PS):            A 16-bit register for storing a register pointer, a condition code

The PS can further be divided into higher 8 bits for use as a register bank pointer (RP) and the lower 8 bits for use as a condition code register (CCR). (See the diagram below.)

The RP indicates the address of the register bank currently in use. The relationship between the pointer contents and the actual address is based on the conversion rule illustrated below.

### Rule for Conversion of Actual Addresses of the General-purpose Register Area

The CCR consists of bits indicating the results of arithmetic operations and the contents of transfer data and bits for control of CPU operations at the time of an interrupt.

- H-flag: Set when a carry or a borrow from bit 3 to bit 4 occurs as a result of an arithmetic operation. Cleared otherwise. This flag is for decimal adjustment instructions.
- I-flag: Interrupt is allowed when this flag is set to 1. Interrupt is prohibited when the flag is set to 0. Set to 0 when reset.
- IL1, 0: Indicates the level of the interrupt currently allowed. Processes an interrupt only if its request level is higher than the value indicated by this bit.

IL1	ILO	Interrupt level	High-low
0	0	1	High ↑ ↓ Low = no interrupt
0	1		
1	0	2	
1	1	3	

- N-flag: Set if the MSB is set to 1 as the result of an arithmetic operation. Cleared when the bit is set to 0.
- Z-flag: Set when an arithmetic operation results in 0. Cleared otherwise.
- V-flag: Set if the complement on 2 overflows as a result of an arithmetic operation. Reset if the overflow does not occur.
- C-flag: Set when a carry or a borrow from bit 7 occurs as a result of an arithmetic operation. Cleared otherwise. Set to the shift-out value in the case of a shift instruction.

# MB89640 Series

The following general-purpose registers are provided:

General-purpose registers: An 8-bit register for storing data

The general-purpose registers are 8 bits and located in the register banks of the memory. One bank contains eight registers. Up to a total of 16 banks can be used on the MB89643 and a total of 32 banks can be used on the MB89645/646/647/P647/PV640. The bank currently in use is indicated by the register bank pointer (RP).

Note: The number of register banks that can be used varies with the RAM size.

## ■ ELECTRICAL CHARACTERISTICS

### 1. Absolute Maximum Ratings

( $AV_{SS} = V_{SS} = 0.0\text{ V}$ )

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
Power supply voltage	$V_{CC}$ $AV_{CC}$ $DAVC$	$V_{SS} - 0.3$	$V_{SS} + 7.0$	V	*
A/D converter reference input voltage	AVRH	$V_{SS} - 0.3$	$V_{SS} + 7.0$	V	AVRH must not exceed $AV_{CC} + 0.3\text{ V}$ .
	AVRL	$V_{SS} - 0.3$	$V_{SS} + 7.0$	V	AVRL must not exceed AVRH.
Program voltage	$V_{PP}$	$V_{SS} - 0.3$	13.0	V	MOD1 pin on MB89P647
Input voltage	$V_I$	$V_{SS} - 0.3$	$V_{CC} + 0.3$	V	P52 to P57 with a pull-up resistor and other input ports
	$V_{I2}$	$V_{SS} - 0.3$	$V_{SS} + 7.0$	V	P52 to P57 without a pull-up resistor
Output voltage	$V_O$	$V_{SS} - 0.3$	$V_{CC} + 0.3$	V	P40 to P47 and P52 to P57 with a pull-up resistor and other output ports
	$V_{O2}$	$V_{SS} - 0.3$	$V_{SS} + 17.0$	V	P40 to P47 without a pull-up resistor
	$V_{O3}$	$V_{SS} - 0.3$	$V_{SS} + 7.0$	V	P52 to P57 without a pull-up resistor
"L" level maximum output current	$I_{OL}$	—	20	mA	
"L" level average output current	$I_{OLAV}$	—	4	mA	Average value (operating current $\times$ operating rate)
"L" level total average output current	$\sum I_{OLAV}$	—	40	mA	Average value (operating current $\times$ operating rate)
"L" level total maximum output current	$\sum I_{OL}$	—	100	mA	
"H" level maximum output current	$I_{OH}$	—	-20	mA	
"H" level average output current	$I_{OHAV}$	—	-4	mA	Average value (operating current $\times$ operating rate)
"H" level total average output current	$\sum I_{OHAV}$	—	-20	mA	Average value (operating current $\times$ operating rate)
"H" level total maximum output current	$\sum I_{OH}$	—	-50	mA	
Power consumption	$P_D$	—	500	mW	

(Continued)

# MB89640 Series

(Continued)

(AV<sub>SS</sub> = V<sub>SS</sub> = 0.0 V)

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
Operating temperature	T <sub>A</sub>	-40	+85	°C	
Storage temperature	T <sub>stg</sub>	-55	+150	°C	

\* : Use DAVC and AV<sub>CC</sub> and V<sub>CC</sub> set at the same voltage.

Take care so that DAVC and AV<sub>CC</sub> does not exceed V<sub>CC</sub>, such as when power is turned on.

Precautions: Permanent device damage may occur if the above “Absolute Maximum Ratings” are exceeded. Functional operation should be restricted to the conditions as detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## 2. Recommended Operating Conditions

(AV<sub>SS</sub> = V<sub>SS</sub> = 0.0 V)

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
Power supply voltage	V <sub>CC</sub> AV <sub>CC</sub> DAVC	2.2*	6.0*	V	Normal operation assurance range* (MB89643/645/646/647)
		2.7*	6.0*	V	Normal operation assurance range* (MB89P647/PV640)
		1.5	6.0	V	Retains the RAM state in stop mode
A/D converter reference input voltage	AVRH	3.0	AV <sub>CC</sub>	V	
	AVRL	0.0	2.0	V	
Operating temperature	T <sub>A</sub>	-40	+85	°C	

\* : These values vary with the operating frequency and analog assurance range. See Figure 1, “5. A/D Converter Electrical Characteristics,” and “6. D/A Converter Electrical Characteristics.”

**Figure 1 Operating Voltage vs. Main Clock Operating Frequency**

Figure 1 indicates the operating frequency of the external oscillator at an instruction cycle of  $4/F_{CH}$ .

Since the operating voltage range is dependent on the instruction cycle, see minimum execution time if the operating speed is switched using a gear.

\*1: Connect MOD0 and MOD1 to  $V_{CC}$  or  $V_{SS}$ .

\*2: High-speed operation is the operation when the system clock is set to the maximum speed by the system clock select bit at 10-MHz clock.

\*3: Low-speed operation is the operation when the system clock is set to the maximum speed by the system clock select bit at 10-MHz clock.

# MB89640 Series

## 4. AC Characteristics

### (1) Reset Timing

( $V_{CC} = +5.0 V \pm 10\%$ ,  $AV_{SS} = V_{SS} = 0.0 V$ ,  $T_A = -40^\circ C$  to  $+85^\circ C$ )

Parameter	Symbol	Condition	Value		Unit	Remarks
			Min.	Max.		
$\overline{RST}$ "L" pulse width	$t_{ZLZH}$	—	48 $t_{CYL}$	—	ns	

\* :  $t_{CYL}$  is the oscillation cycle ( $1/F_{CH}$ ) to input to the X0 pin.

### (2) Power-on Reset

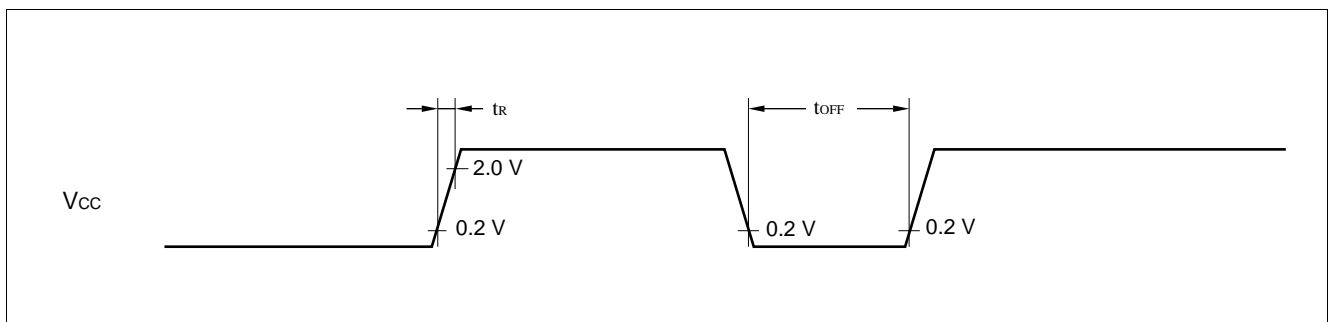

( $AV_{SS} = V_{SS} = 0.0 V$ ,  $T_A = -40^\circ C$  to  $+85^\circ C$ )

Parameter	Symbol	Condition	Value		Unit	Remarks
			Min.	Max.		
Power supply rising time	$t_r$	—	—	50	ms	
Power supply cut-off time	$t_{OFF}$		1	—	ms	Due to repeated operation

Note: Make sure that power supply rises within the selected oscillation stabilization time.

For example, when the main clock is operating at 10 MHz ( $F_{CH}$ ) and the oscillation stabilization time select option has been set to  $2^{14}/F_{CH}$ , the oscillation stabilization delay time is 1.6 ms and accordingly the maximum value of power supply rising time is about 1.6 ms.

Keep in mind that abrupt changes in power supply voltage may cause a power-on reset. If power supply voltage needs to be varied in the course of operation, a smooth voltage rise is recommended.

## (3) Clock Timing

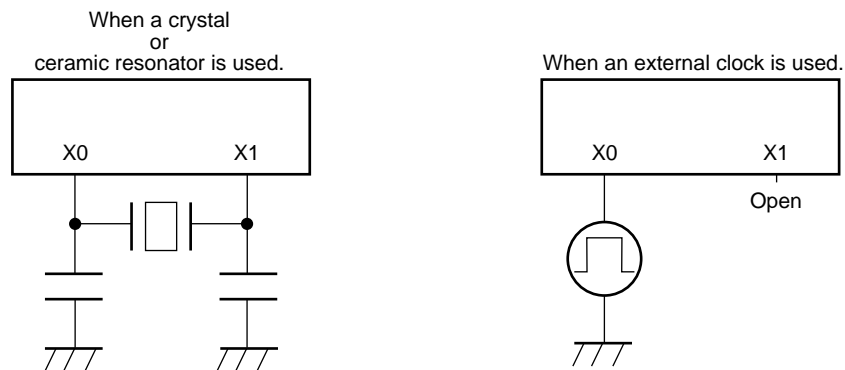

( $V_{SS} = V_{SS} = 0.0\text{ V}$ ,  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ )

Parameter	Symbol	Pin	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
Clock frequency	$F_{CH}$	X0, X1	—	1	—	10	MHz	
	$F_{CL}$	X0A, X1A		—	32.768	—	kHz	
Clock cycle time	$t_{XCYL}$	X0, X1		100	—	1000	ns	
	$t_{LXCYL}$	X0A, X1A		—	30.5	—	$\mu\text{s}$	
Input clock pulse width	$P_{WH}$ $P_{WL}$	X0		20	—	—	ns	External clock
	$P_{WHL}$ $P_{WLL}$	X0A		—	30.5	—	$\mu\text{s}$	
Input clock rising/falling time	$t_{CR}$ $t_{CF}$	X0		—	—	10	ns	External clock

# MB89640 Series

## (1) A/D Glossary

- Resolution  
Analog changes that are identifiable with the A/D converter.  
When the number of bits is 8, analog voltage can be divided into  $2^8 = 256$ .
- Linearity error (unit: LSB)  
The deviation of the straight line connecting the zero transition point (“0000 0000” ↔ “0000 0001”) with the full-scale transition point (“1111 1111” ↔ “1111 1110”) from actual conversion characteristics
- Differential linearity error (unit: LSB)  
The deviation of input voltage needed to change the output code by 1 LSB from the theoretical value
- Total error (unit: LSB)  
The difference between theoretical and actual conversion values

## (2) Precautions

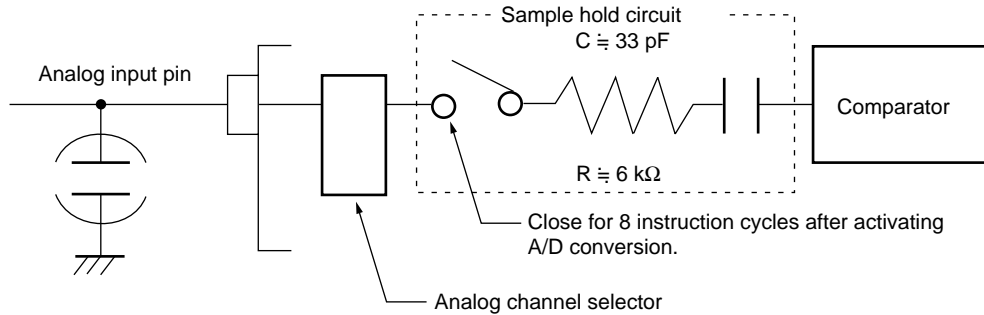

### • Input impedance of the analog input pins

The A/D converter used for the MB89640 series contains a sample hold circuit as illustrated below to fetch analog input voltage into the sample hold capacitor for eight instruction cycles after activating A/D conversion. For this reason, if the output impedance of the external circuit for the analog input is high, analog input voltage might not stabilize within the analog input sampling period. Therefore, it is recommended to keep the output impedance of the external circuit low (below 10 kΩ).

Note that if the impedance cannot be kept low, it is recommended to connect an external capacitor of about 0.1 μF for the analog input pin.

## Analog Input Equivalent Circuit

If the analog input impedance is higher than  $10\text{ k}\Omega$ , it is recommended to contact an external capacitor of about  $0.1\text{ }\mu\text{F}$ .

- **Error**

The smaller the  $|AVRH - AVRL|$ , the greater the error would become relatively.

## 6. D/A Converter Electrical Characteristics

( $DAVC = V_{CC} = +3.5\text{ V to }+6.0\text{ V}$ ,  $F_{CH} = 10\text{ MHz}$ ,  $AV_{SS} = V_{SS} = 0.0\text{ V}$ ,  $T_A = -40^\circ\text{C to }+85^\circ\text{C}$ )

Parameter	Symbol	Value			Unit	Remarks
		Min.	Typ.	Max.		
Resolution	—	—	—	8	bit	DAVC = $V_{CC} = 5.0\text{ V}$
Linearity error		—	—	$\pm 1.0$	LSB	
Differential linearity error		—	—	$\pm 0.9$	LSB	
Output impedance		—	20	—	$\text{k}\Omega$	
D/A analog power supply current (for one channel)	$I_{DINA}$	—	0.1	—	mA	At no load and conversion cycle of $5\text{ }\mu\text{s}$
	$I_{DINS}$	—	0.1	—	$\mu\text{A}$	During power down

## ■ INSTRUCTIONS

Execution instructions can be divided into the following four groups:

- Transfer
- Arithmetic operation
- Branch
- Others

Table 1 lists symbols used for notation of instructions.

**Table 1 Instruction Symbols**

Symbol	Meaning
dir	Direct address (8 bits)
off	Offset (8 bits)
ext	Extended address (16 bits)
#vct	Vector table number (3 bits)
#d8	Immediate data (8 bits)
#d16	Immediate data (16 bits)
dir: b	Bit direct address (8:3 bits)
rel	Branch relative address (8 bits)
@	Register indirect (Example: @A, @IX, @EP)
A	Accumulator A (Whether its length is 8 or 16 bits is determined by the instruction in use.)
AH	Upper 8 bits of accumulator A (8 bits)
AL	Lower 8 bits of accumulator A (8 bits)
T	Temporary accumulator T (Whether its length is 8 or 16 bits is determined by the instruction in use.)
TH	Upper 8 bits of temporary accumulator T (8 bits)
TL	Lower 8 bits of temporary accumulator T (8 bits)
IX	Index register IX (16 bits)

*(Continued)*

# MB89640 Series

(Continued)

Symbol	Meaning
EP	Extra pointer EP (16 bits)
PC	Program counter PC (16 bits)
SP	Stack pointer SP (16 bits)
PS	Program status PS (16 bits)
dr	Accumulator A or index register IX (16 bits)
CCR	Condition code register CCR (8 bits)
RP	Register bank pointer RP (5 bits)
Ri	General-purpose register Ri (8 bits, i = 0 to 7)
×	Indicates that the very × is the immediate data. (Whether its length is 8 or 16 bits is determined by the instruction in use.)
( × )	Indicates that the contents of × is the target of accessing. (Whether its length is 8 or 16 bits is determined by the instruction in use.)
(( × ))	The address indicated by the contents of × is the target of accessing. (Whether its length is 8 or 16 bits is determined by the instruction in use.)

Columns indicate the following:

Mnemonic: Assembler notation of an instruction

~: Number of instructions

#: Number of bytes

Operation: Operation of an instruction

TL, TH, AH: A content change when each of the TL, TH, and AH instructions is executed. Symbols in the column indicate the following:

- “-” indicates no change.
- dH is the 8 upper bits of operation description data.
- AL and AH must become the contents of AL and AH immediately before the instruction is executed.
- 00 becomes 00.

N, Z, V, C: An instruction of which the corresponding flag will change. If + is written in this column, the relevant instruction will change its corresponding flag.

OP code: Code of an instruction. If an instruction is more than one code, it is written according to the following rule:

Example: 48 to 4F ← This indicates 48, 49, ... 4F.

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document are presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

The contents of this document may not be reproduced or copied without the permission of FUJITSU LIMITED.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipments, industrial, communications, and measurement equipments, personal or household devices, etc.).

#### CAUTION:

Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Control Law of Japan, the prior authorization by Japanese government should be required for export of those products from Japan.
