1. General Specifications

Screen Size	:	3.52 inches (8.9cm)
Display Mode	:	Normally White
Driving Method	:	a-Si TFT active matrix format
Display Format	:	240×3 [R.G.B] (W) × 320 (H)
Resolution	:	720(W) x 320(H)
Dot Pitch	:	0.0745(W) x 0.2235(H) mm
Pixel Configuration	:	RGB Stripe
Active Area	:	53.64(W) x 71.52(H) mm
Outline Dimension	:	65.0(W) x 86.2(H) x 3.4(D) mm
Weight	:	46g max.
Backlight	:	LED Backlight / White
Attached Drawing	:	Dimensional Outline T-51963AB base

2. Operating Conditions

Item		Conditions	Temperature Range	Remark
Operating Temperature Range	LCD Module w/Backlight	Panel Surface	-20~70°C	Note2-1,2-2
Storage Temperature Range	LCD Module w/Backlight	Panel Surface	-30~70°C	Note2-3

Note2-1: Operating temperature range defines the operation only and the contrast, response time and other display optical characteristics are set at Ta=+25°C.

Note2-2: Panel surface temperature indicates the temperature of the backlight panel surface on the five points from the four corners and the center. Also note that the panel temperature of backlight side is 10°C (reference value) higher than the other side.

Note2-3: Backlight is not activated.

3. Electrical Specifications

3.1. Absolute Maximum Ratings

Item	Symbol	Conditions	Min.	Max.	Units
Supply voltage	VDDA	Ta=25±5°C VSS=0V	0	+6.0	V
	VGH		0	+18.0	V
	VGL		-15.0	0	V
Data Signal Voltage	VDDD		-0.3	+6.0	V

Note: Absolute maximum ratings should not exceed the limit any time. If the product exceeds the limit, it may cause damage. Please be cautious to the changes in supply voltage, connection parts, surge of signals, and ambient temperature.

3.2. Description

Item	Description	Remark
Display Size	3.5" (8.9cm)	
Display Method	TN full color (transflective type)	Normally White
Driving Method	a-Si TFT Active Matrix Line Scanning	
Pixel Alignment	RGB Stripe alignment	
Visual Signal Input Method	RGB × 6bits CMOS Level	
Controlled Signal Input Method	CMOS Level	
Backlight	LED, Edge light

3.6. Power Supply Sequence

Please follow below for power supply sequence.

When the power is on, all power source is assumed to be at 90% and when power is off, all power source is assumed to be at 10%.

Please avoid any single power source to be outside of the sequence written below.

Power ON Sequence	VDDD → VGH / VGL → VDDA → Data
Power OFF Sequence	Data → VDDA → VGH / VGL → VDDD

◆ Conditions for Measuring

- ◇ Environment: Dark room with no light or close to no light.
- ◇ Temperature: $25\pm 5^{\circ}\text{C}$
- ◇ Humidity: 40~70%RH

◆ Optimal viewing angle (The angle with best contrast)

6 O'clock(NON INVERTING)

Method of Brightness Measurement

1) Measuring Device

TOPCON BM-7, Measuring Field: 1°

2) Measuring Point

Center of Display $\theta=0^{\circ}$, $\phi=0^{\circ}$

On Conditions θ : A vertical angle from measuring direction to perpendicular.

ϕ : A horizontal angle from measuring direction to perpendicular.

3) Method of Measuring

Apply signal voltage (displayed in white) to maximize Brightness and measure brightness B (cd/m^2).

The distance between BM-7's front lens to surface panel is 500mm.

(D4-1b)

◆ Method of Brightness Measurement(Reflective mode)

1) Measuring Conditions:

Measuring equipment : Colorimeter: (Yokogawa M&C Corporation)

2) Incident angle : 15°

Measured angle : 0°

(Angle is defined from normal direction)

3) Light source

Ring light (C light source)

4) Definition of reflectance

Reflection of reflection standard is defined as 100%

5)
$$\frac{\text{Brightness of LCD}}{\text{Brightness of backlight}} \times 100 \quad (\text{ in all white pattern })$$

◆ Method of Contrast Measurement

1) Measuring Device

Colorimeter: (Yokogawa M&C Corporation)

2) Measuring Point

Center of display : Same as Method of Brightness Measurement

3) Method of Measuring

- Set LCD module to $\theta=0^\circ, \phi=0^\circ$
- Change signal voltage to measure maximum Brightness Y1 and minimum brightness Y2.
- Contrast is derived from $CR=Y1/Y2$.

(D4-2)

◆ Definition of Brightness Uniformity

Definition is calculated from the 5 points (S0-S4) on the diagram below.

$$\text{Standard value of Brightness Uniformity} = \frac{\text{Minimum value of S1-S4}}{S0}$$

(D4-3)

◆ Method of Viewing Angle Measurement

1) Measuring Device

TOPCON BM-7, Measuring Field: 1°

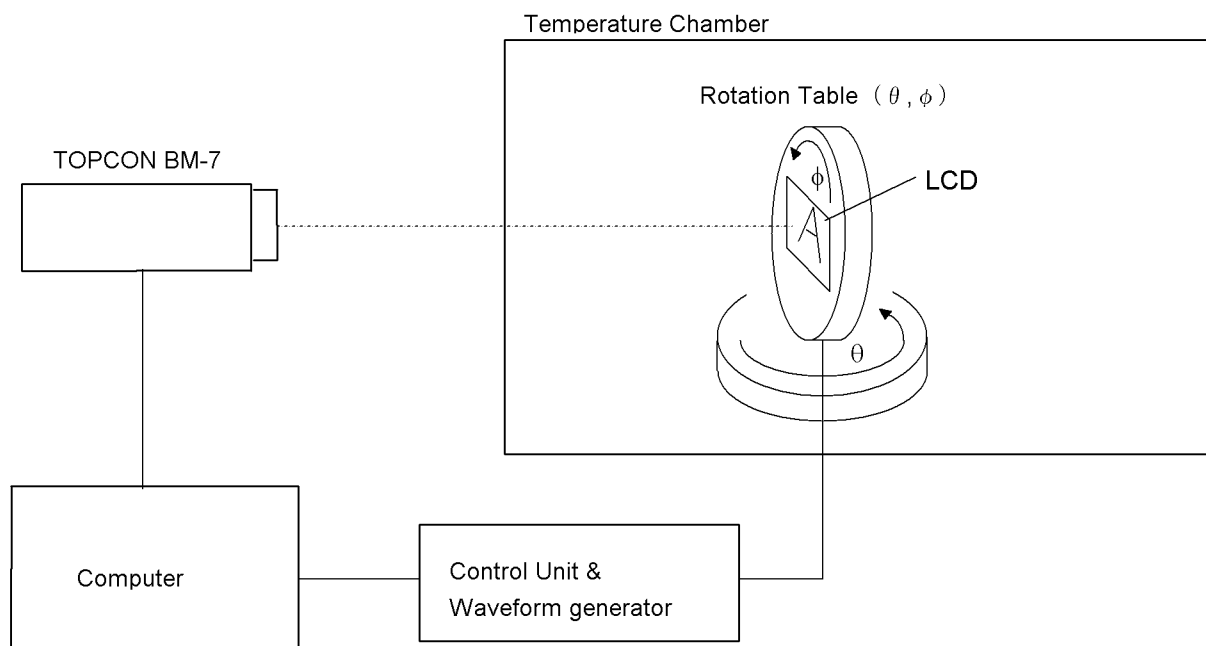

2) Measuring Point

Center of display: Same as Method of Brightness Measurement

3) Angle of Measuring

θ : An angle vertical to perpendicular line from the viewing direction.

ϕ : An angle horizontal to perpendicular from the viewing direction.

4) Method of Measuring

Set rotation table to $\phi=0^\circ$ and set BM-7 to contrast 10 to measure angle $\pm \theta$ for left and right direction of horizontal viewing angle ϕ . Also set rotation table to $\phi=90^\circ$ and set BM-7 to contrast 10 to measure angle $\pm \theta$ for up and down direction of vertical viewing angle θ .

(D4-4)

◆ Measuring Response Time

(1) Measuring Device

TOPCON BM-7 , Measuring Field : 1°

Tektronix Digital Oscilloscope

(2) Measuring Point

Center of display, same as Method of Brightness Measurement

(3) Method of Measuring

- Set LCD panel to $\theta=0^\circ$, and $\phi=0^\circ$.
- Input white→black→white to display by switching signal voltage.
- If the luminance is 0% and 100% immediately before the change of signal voltage, then τ_r is optical response time during the change from 90% to 10% immediately after rise of signal voltage, and τ_d is optical response time during the change from 10% to 90% immediately after decay of signal voltage.

a) Bright dot

Green/Red/Blue dots : When the MODULE lights, dots appear bright in display at black picture position.

Count : Visible through 5% transparency of filter (Red, Green, Blue)

No count : Not visible through 5% transparency of filter

b) Black dot

Black dots : When the Module lights, dots appear black in display at white picture position.

c) Scratch on the color filter

Count : Visible over the half of a dot

No count : Visible under the half of a dot

d) Scratch on the Black mask

8. Code System of Production Lot

The production lot of module is specified as follows.

9. Type Number

The type number of module is specified as follows.

T-51963GD035J-MLW-AFN

10. Applying Precautions

Please contact us when questions and/or new problems not specified in this Specifications arise.

11. Precautions Relating Product Handling

The Following precautions will guide you in handling our product correctly.

- 1) Liquid crystal display devices
 1. The liquid crystal display device panel used in the liquid crystal display module is made of plate glass. Avoid any strong mechanical shock. Should the glass break handle it with care.
 2. The polarizer adhering to the surface of the LCD is made of a soft material. Guard against scratching it.
- 2) Care of the liquid crystal display module against static electricity discharge.
 1. When working with the module, be sure to ground your body and any electrical equipment you may be using. We strongly recommend the use of anti static mats (made of rubber), to protect work tables against the hazards of electrical shock.
 2. Avoid the use of work clothing made of synthetic fibers. We recommend cotton clothing or other conductivity-treated fibers.
 3. Slowly and carefully remove the protective film from the LCD module, since this operation can generate static electricity.
- 3) When the LCD module alone must be stored for long periods of time:
 1. Protect the modules from high temperature and humidity.
 2. Keep the modules out of direct sunlight or direct exposure to ultraviolet rays.
 3. Protect the modules from excessive external forces.
- 4) Use the module with a power supply that is equipped with an overcurrent protector circuit, since the module is not provided with this protective feature.
- 5) Do not ingest the LCD fluid itself should it leak out of a damaged LCD module. Should hands or clothing come in contact with LCD fluid, wash immediately with soap.
- 6) Conductivity is not guaranteed for models that use metal holders where solder connections between the metal holder and the PCB are not used. Please contact us to discuss appropriate ways to assure conductivity.
- 7) For models which use CFL:
 1. High voltage of 1000V or greater is applied to the CFL cable connector area. Care should be taken not to touch connection areas to avoid burns.
 2. Protect CFL cables from rubbing against the unit and thus causing the wire jacket to become worn.
 3. The use of CFLs for extended periods of time at low temperatures will significantly shorten their service life.
- 8) For models which use touch panels:
 1. Do not stack up modules since they can be damaged by components on neighboring modules.
 2. Do not place heavy objects on top of the product. This could cause glass breakage.
- 9) For models which use COG, TAB, or COF:
 1. The mechanical strength of the product is low since the IC chip faces out unprotected from the rear. Be sure to protect the rear of the IC chip from external forces.
 2. Given the fact that the rear of the IC chip is left exposed, in order to protect the unit from electrical damage, avoid installation configurations in which the rear of the IC chip runs the risk of making any electrical contact.

- 10) Models which use flexible cable, heat seal, or TAB:
 1. In order to maintain reliability, do not touch or hold by the connector area.
 2. Avoid any bending, pulling, or other excessive force, which can result in broken connections.
