3.GENERAL DATA

3.GENERAL DATA
The specifications are applied to the following TFT-LCD (Thin Film Transistor with Amorphous Silicon Technology) module with Back-light unit. Inverter device for Back-light is not built in this Module.

(1)	Part Name	TX14D14VM1BBA
(2)	Module Dimensions	131.0(W)mm x 102.2(H)mm x 13.1(D)mm typ.
(3)	LCD Active Area	115.2(W)mm x 86.4(H)mm
(4)	Dot Pitch	0.06(W)mm x 3(R,G,B)(W) x 0.18(H)mm
(5)	Resolution	640x3(R,G,B))(W)x480(H) dots
(6)	Color Pixel Arrangement	R,G,B Vertical stripe
(7)	LCD Type	Transmissive Color TFT LCD (Normally White)
(8)	Display Type	Active Matrix
(9)	Number of Colors	262k Colors (R,G,B 6bit digital each)
(10)	Backlight	Cold Cathode Fluorescent Tube (L shaped CFL) x 1
(11)	Weight	(200)g (typ.)
(12)	Interface	40pin (C-MOS)
(13)	Power Supply Voltage	3.3V only (Include Timing Controller and Power Unit)
(14)	Viewing Direction	6 O'clock (The direction it's hard to be discolored)
(15)	Touch Panel	Resistance type
		The Surface is antiglare type.

Note 1 : Ta ≤ 40°C :85%RH max.

Ta> 40° C :Absolute humidity must be lower than the humidity of 85%RH at 40° C.

Note 2 : For storage condition Ta at -30° C < 48h, at 80° C < 100h. For operating condition Ta at -20° C < 48h, at 70° C < 100h.

Note 3: Background color changes slightly depending on ambient temperature. This phenomenon is reversible.

Note 4:5Hz~100Hz(Except resonance frequency)

Note 5: This LCM will resume normal operation after finishing the test.

Note 6: The response time will be slower at low temperature.

Note 7: Only operation is guarantied at operating temperature. Contrast, response time, another display quality are evaluated at +25°C.

Note 8: When LCM is operated over 60°C ambient temperature, the ICFL of LCM should be adjusted to 3mA max.

Note 9: Pulse Width: 10ms

Note 10: This is panel surface temperature, not ambient temperature.

Note 11: When brightness reached 50% of initial brightness.

Note 12: When LCM be operated less than 0°C, the life time of CFL will be reduced. The rise time of CFL ON will be longer when the ambient temperature below 0°C and confirming the characteristics of inverter is necessary.

5.3 ELECTRICAL CHARACTERISTICS OF BACK-LIGHT

!TEM	SYMBOL	MIN.	TYP.	MAX.	UNIT	NOTE
Lamp Voltage	VL	-	(760)	_	Vrms	Ta=25°C ·

Lamp Current (Note 5,6,7)	IL	(2.0)	(5.0)	6.0	mA	Ta=25℃
Starting Discharge Voltage	VS (Note 2)	(1300)	<u>-</u>	-	Vrms	Ta=5°C

- Note 1 : Please design your lamp driving circuit (inverter) according to the above specifications, and inform HITACHI about it.
- Note 2 : Starting discharge voltage is increased when LCM is operating under low temperature.
 - Please check the characteristics of your inverter before applying to your set.
- Note 3 : Average life time of CFL will be decreased when LCM is operating under low temperature.
- Note 4: Under lower driving frequency of an inverter, a certain Back-light system (CFL & CFL reflection sheet) may generate a sound noise. Before designing the inverter, please consider the driving frequency and noise.
- Note 5: When IL is over 6.0mA, it may cause uneven contrast near CFL location, due to heat dispersion from CFL.
- Note 6: We recommend to equip protection circuit (to stop output) which works under abnormal operation to the inverter for CFL
- Note 7: Measurement of IL is provided for GND side of CFL.

10. APPEARANCE STANDARD

- 10.1 APPEARANCE INSPECTION CONDITION

 Visual inspection should be done under the following condition.
- (1) The inspection should be done in a dark room. (about 1000(lx),500(lx)min. and non-directive)
- (2) The distance between eyes of an inspector and the LCD module is 30cm.
- (3) The viewing zone is shown the figure. The θ is defined as $\theta \le 45^\circ$ for LCM power off $\theta \le 5^\circ$ for LCM power on

Adjacent dots to defect dot "X":

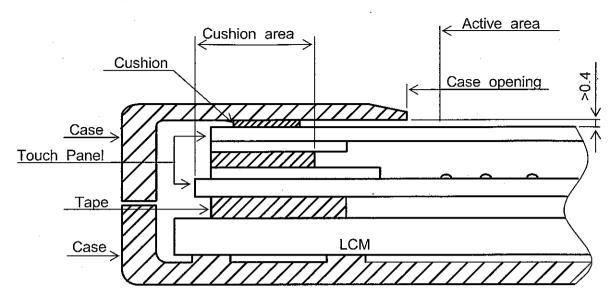

- (f) Counting definition of adjacent dots (1 set): same as 1 dot defect.

11. PRECAUTION IN DESIGN

11.1 MOUNTING PRECAUTION

(1) When assembling the Touch Panel on you case, please refer to the figure below.

- (2) The clearance between the Touch Panel and case shall be designed so that the case edge never presses the input screen when it is deformed by heat or other causes.
- (3) The case shall be designed not to touch the tail portion (FPC for Touch Panel).
- (4) The boundary space between the effective area and the insulated area is unstable. Touching this area may effect the operation of the Touch Panel.

 The case must be designed so that it does not touch the boundary space.

11.2 PRECAUTIONS AGAINST ELECTROSTATIC DISCHARGE

As this module contains C-MOS LSIs, it is not strong against electrostatic discharge. Make certain that the operator's body is connected to the ground through a list band, etc. And don't touch I/F pins directly.

11.3 HANDLING PRECAUTIONS

- (1) Since the Touch Panel on the top, and the frame on the bottom tend to be easily damaged, they should be with full care so as not to get them touched, pushed or rubbed by a piece on glass, tweezers and anything else which are harder a pencil lead 3H.
- (2) As the adhesives used for adhering upper/lower polarizer's and frame are made of organic substances which will be deteriorated by a chemical reaction with such chemicals as acetone, toluene, ethanol and isopropyl alcohol. The following are recommended for use:

normal hexane

Please contact with us when it is necessary for you to use chemicals other than the above.

KAOHSIUNG HITACHI		May 12 '09	Sh.	7B64PS 2711-TX14D14VM1BBA-4	DAGE	11 1/2
ELECTRONICS CO.,LTD.	DATE	May.13,'08	No.	7B04P3 2711-1X14D14VW1BBA-4	FAGE	11-1/3

- Lightly wipe to clean the dirty surface with absorbent cotton or other soft material like chamois, soaked in the recommended chemicals without scrubbing it hardly. Always wipe the surface horizontally or vertically. Never give a wipe in a circle. To prevent the display surface from damage and keep the appearance in good state, it is sufficient, in general, to wipe it with absorbent cotton.
- (4) Immediately wipe off saliva or water drop attached on the display area because it may cause deformation or faded color.
- (5) Fogy dew deposited on the surface may cause a damage, stain or dirt to the polarizer.

When you need to take out the LCD module from some place at low temperature for test, etc.

It is required to be warmed them up to temperature higher than room temperature before taking them out.

- (6) Touching the display area or I/F pins with bare hands or contaminating them are prohibited, because the stain on the display area and poor insulation between terminals are often caused by being touched with bare hands. (Some cosmetics are detrimental to polarizer's.)
- (7) In general, the glass is fragile so that, especially on its periphery, tends to be cracked or chipped in handling. Please not give the LCD module sharp shocks by falling, etc.
- (8) Maximum pressure to the surface must be less than 1.96×10⁴ Pa.

 And if the pressure area is less than 1cm², maximum pressure must be less than 1.96N.
- (9) Since the metal width is narrow on these locations (see page 9-1/1), please careful with handling.
- (10) Top sheets shall be cleaned gently using a soft cloth such as those used for glasses. Hard wiping accumulated dust will leave scars on the surface even using a cloth.

11.4 OPERATION PRECAUTION

- (1) Using a LCM module beyond its maximum ratings may result in its permanent destruction.
 - LCM module's should usually be used under recommended operating conditions shown in chapter 5. Exceeding any of these conditions may adversely affect its reliability.
- (2) Response time will be extremely delayed at lower temperature than the specified operating temperature range and on the other hand LCD's shows dark blue at higher temperature.
 - However those phenomena do not main defects of the LCD module. Those phenomena will disappear in the specified operating temperature range.

- (3) If the display area is pushed hard during operation, some display patterns will be abnormally display.
- (4) A slight dew depositing on terminals may cause electrochemical reaction which leads to terminal open circuit. Please operate the LCD module under the relative condition of 40°C 85%RH.
- (5) Resistance range: Your controller shall be set up to allow the resistance range of Touch Panel specified in our CAS.
- (6) Pointed position of Touch Panel may shift owing to a change in resistance of Touch Panel depending on the operation condition. To compensate this shift, the set shall be given a calibration function.
- (7) Input shall be made with a stylus pen (poly acetal, R0.8). Chances are very high that use of a metal piece including a ball point pen or sharp edge will impair accuracy.
- (8) The Touch Panel is an auxiliary input device. The system shall be designed to have other input device.

11.5 STORAGE

In case of storing LCD module for a long period of time (for instance, for years) for the purpose of replacement use, the following precautions necessary.

- Store the LCD modules in a dark place; do not expose them to sunlight or ultraviolet rays.
- (2) Keep the temperature between 10°C and 35°C at normal humidity.
- (3) Store the LCD modules in the container which is used for shipping from us.
- (4) No articles shall be left on the surface over an extended period of time.

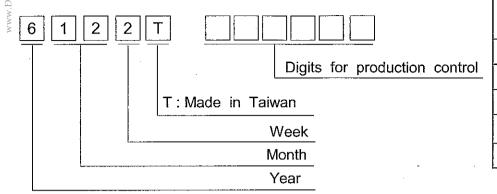

11.6 SAFETY

Wear finger cots or gloves whenever handling or assembling a Touch Panel its glass edges are sharp.

12. DESIGNATION OF LOT MARK

12.1 LOT MARK

Lot mark is consisted of 5 digits for production lot and 6 digits for production control.

13. PRECAUTION FOR USE

- (1) A limit sample should be provided by the both parities on an occasion when the both parties agree to its necessity. Judgment by a limit sample shall take effect after the limit sample has been established and confirmed by the both parties.
- (2) On the following occasions, the handling of the problem should be decided through discussion and agreement between responsible persons of the both parties.
 - (1) When a question is arisen in the specifications.
 - (2) When a new problem is arisen which is not specified in this specifications.
 - (3) When an inspection specifications change or operating condition change by customer is reported to HITACHI, and some problem is arisen in the specification due to the change.
 - (4) When a new problem is arisen at the customer's operating set for sample evaluation.
- (3) Regarding the treatment for maintenance and repairing, both parties will discuss it in six months later after latest delivery of this product.

The precaution that should be observed when handling LCM have been explained above.

If any points are unclear or if you have any requests, please contact with HITACHI.
