Description

The SN78Mxxx series are three-terminal positive regulators providing 0.5A output current with internal current limiting, thermal shutdown and safe area protection. These regulators are useful in a wide range of applications. Although they are just fixed voltage regulators, the SN78Mxxx series can be used with external components to obtain adjustable voltages and Currents.

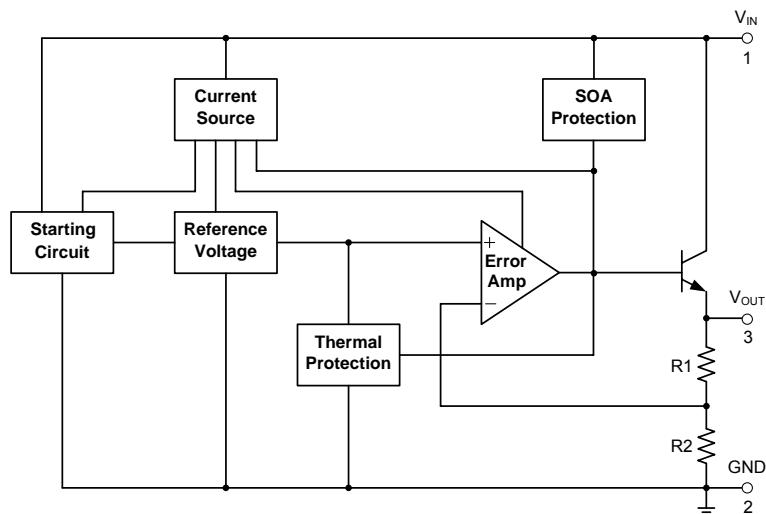

Application

- ◆ Consumer and personal electronics
- ◆ SMPS post-regulator / dc-to-dc modules
- ◆ High-efficiency linear power supplies

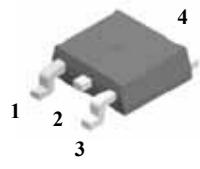

Features and Benefits

- ◆ Output Current up to 0.5A
- ◆ Output Voltage : 5, 6, 8, 9, 10, 12, 15, 18, 24V
- ◆ Built in OVP, CLP circuit.
- ◆ Built in TSD Protection.
- ◆ Output Transistor Safe Area Protection.
- ◆ Ultra High level of ESD [Built in ESD Protection Cell]
MM : 500V / HBM 5KV ↑

◆ Absolute Maximum Ratings (Ta = 25°C)

Parameter	Symbol	Limits		Unit
		TO-220F-3L	TO-252-3L	
Input Voltage	V _{IN}	40.0 (for V _O =24V)		V
		35.0 (for V _O =5 to 18V)		
Power Dissipation	P _d	2.0	1.3	W
Thermal Resistance Junction to Case	R _{EJC}	5	5	°C/W
Thermal Resistance Junction to Air	R _{EJA}	65	92	°C/W
Junction Temperature	T _J	150		°C
Operate Temperature Range	T _{opr}	-40 ~ +125		°C
Storage Temperature Range	T _{stg}	-55 ~ +150		°C

Absolute maximum ratings indicate limits beyond which damage to the component may occur. Electrical specifications do not apply when operating the device outside of its operating ratings. The maximum allowable power dissipation is a function of the maximum junction temperature, T_{J(max)}, the junction-to-ambient thermal resistance, θ_{JA}, and the ambient temperature, TA.

The maximum allowable power dissipation at any ambient temperature is calculated using:

PD(max) = (T_{J(max)} - T_A) ÷ θ_{JA}. Exceeding the maximum allowable power dissipation will result in excessive die temperature, and the regulator will go into thermal shutdown.

* Pulse testing techniques are used to maintain the junction temperature as close to the ambient temperature as possible. Thermal effects must be taken into separately.

** This specification applies only for dc power dissipation permitted by absolute maximum ratings.

Typical Application

Fixed Output Regulator

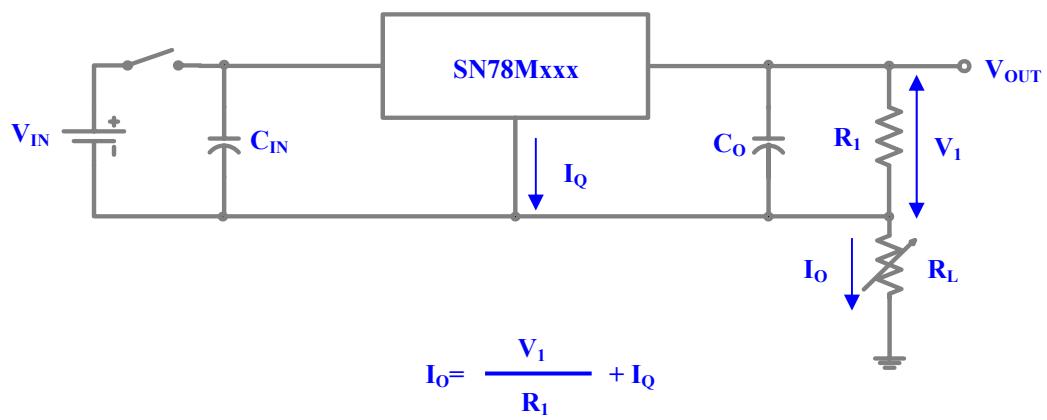

- 1) C_{IN} should be required if regulators are located far from power supply filter
- 2) C_O improves output stability and transient response

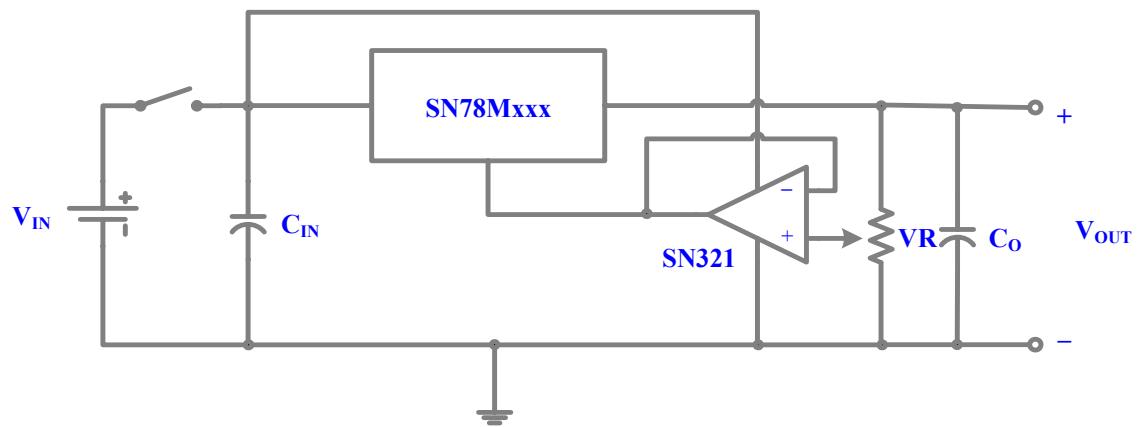

Load Regulation

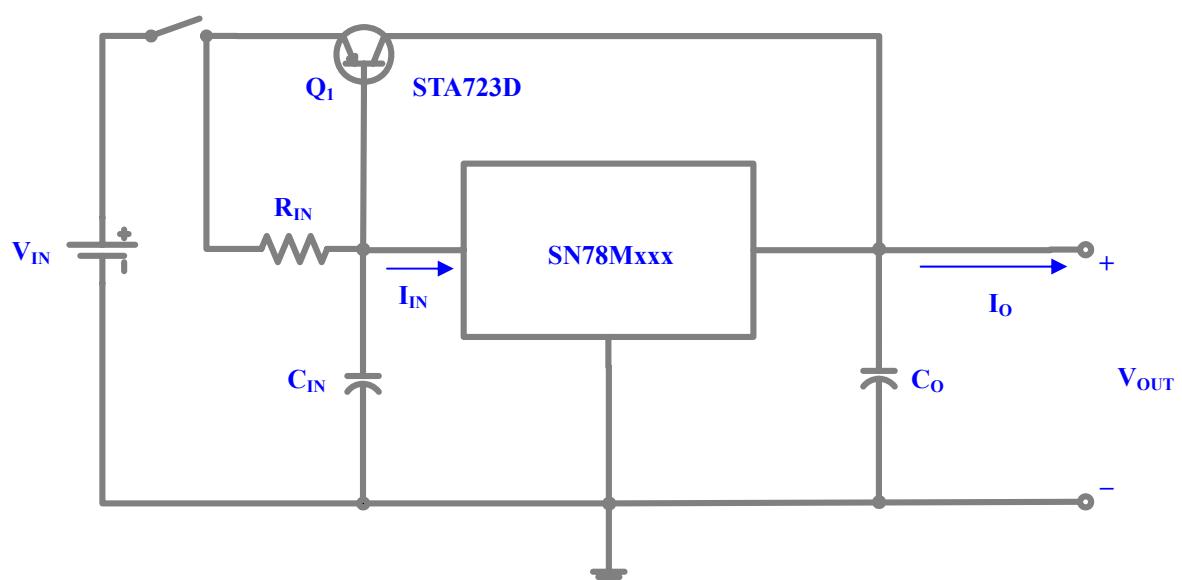

Constant Current Regulator

Adjustable Output Regulator

High Current Voltage Regulator

$$I_O = I_{IN} + \beta_{Q1}(I_{IN} - V_{BEQ1} / R_{IN})$$

The AUK Corp. products are intended for the use as components in general electronic equipment (Office and communication equipment, measuring equipment, home appliance, etc.).

Please make sure that you consult with us before you use these AUK Corp. products in equipments which require high quality and / or reliability, and in equipments which could have major impact to the welfare of human life(atomic energy control, airplane, spaceship, transportation, combustion control, all types of safety device, etc.). AUK Corp. cannot accept liability to any damage which may occur in case these AUK Corp. products were used in the mentioned equipments without prior consultation with AUK Corp..

Specifications mentioned in this publication are subject to change without notice.
