- **Embedded within speaker** specified on alarm warning notice or audio application
- **Hot Pluggable - Add or remove computers** without having to power down the switch

You can control and access multiple computers from a central user console. It saves hundreds of dollars in equipment, space, and power costs. There is no need to have additional peripherals for each computer. The administrator can access multiple computers from one location instead of moving from one to another. Installation is as simple as connecting cables between the LKM-9268 switch and your computers. This is ideal for an Internet data center, server room, testing lab, and network-operating center where multiple computers are required.
