

# 150 WATT (9 AMP CONTINUOUS, 12 AMP PEAK)

PMD 25K

## FEATURES

- Electrical specifications guaranteed for operating junction temperature range of 0 - 150°C
- Guaranteed and 100% tested for  $I_{SB}$  (Secondary Breakdown Current) insuring maximum performance at high energy levels
- Built-in speed up diode for fast turn-off with negative base drive
- Low thermal resistance for more useable power and lower operating temperatures
- Hermetically sealed

## DESCRIPTION

The PMD 25K Series of devices are three-terminal NPN Switching Darlington Power Transistors. These devices are monolithic epitaxial base structures with built-in base to emitter shunt resistors. They have been designed to switch at frequencies up to 30kHz. The devices are CVD glass passivated to increase reliability and provide reduced high-temperature reverse leakage current. Internal diode protection (D1) of the Darlington configuration is built into the structure to limit the device power dissipation during negative overshoot. Diode D2 is built-in to reduce device turn-off time when negative base drive is used.

## ABSOLUTE MAXIMUM RATINGS

PARAMETER	SYMBOL	MAXIMUM	UNITS
Collector Emitter Voltage PMD 25K120 PMD 25K150 PMD 25K200	$V_{CEO}$	120 150 200	Vdc
Collector Base Voltage PMD 25K120 PMD 25K150 PMD 25K200	$V_{CBO}$	120 150 200	Vdc
Emitter Base Voltage	$V_{EBO}$	2	Vdc
Collector Current Continuous Peak	$I_C$	9 12	Adc
Base Current	$I_B$	0.2	Adc
Thermal Resistance	$\theta_{JC}$	1.0	°C/Watt
Total Internal Power Dissipation ( $\Delta T_c = 0^\circ C$ )	$P_D$	150	Watts
Operating Junction and Storage Temperature	$T_J$ $T_{STG}$	-65 to +150 -65 to +200	°C

## DEVICE SELECTION GUIDE

DEVICE	VOLTAGE RATING
PMD 25K120	120V
PMD 25K150	150V
PMD 25K200	200V

Excellent thermal resistance junction to case ( $\theta_{JC}$ ) provides for more useable power at lower operating temperatures. This, coupled with 100%  $I_{SB}$  testing, insures optimum performance and durability in power applications such as switching regulators and inverters. These Darlington devices are hermetically sealed steel TO-3 packages providing high reliability and low thermal resistance.

PMD 25K

## OPERATIONAL DATA

### AC TEST CIRCUIT

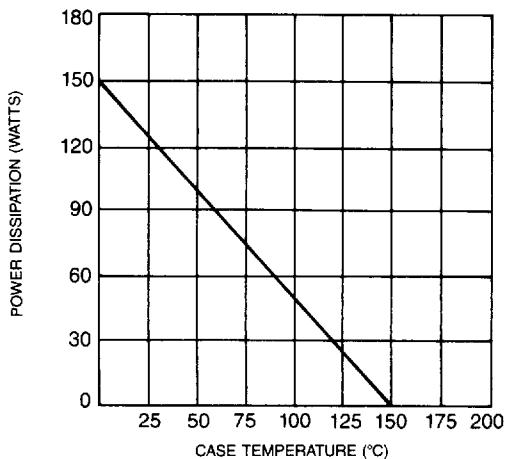

Adjust  $R_c$  to obtain desired  $I_C$ Adjust  $V_{IN}$ ,  $R_{BB1}$  to obtain  $I_{B1} = I_C/100$ Adjust  $V_{IN}$  to 1% duty cycle with pulse rise and fall times less than 10nS.

### SWITCHING WAVEFORMS

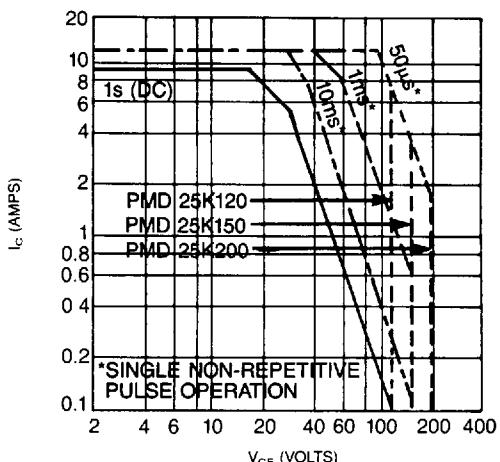

Switching times are specified only under the condition that the device under test is not allowed to enter classical saturation. A Baker Clamp is used to insure that the base-collector junction of the DUT is never forward biased under worst case temperature and drive conditions.
