## MKP 380S - 386S

L max (mm)	11	14	19	26	31	36
d (mm)	0,6	0,6	0,6	0,8	0,8	0,8
L <sub>1</sub> (mm)	16	20	25	32,5	37,5	41

Maximum pulse rise time dU/dt [V/μsec]

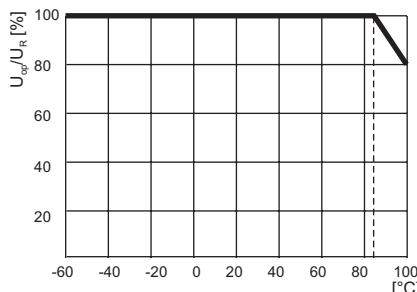

Lmax (mm)	≤ 14	19	26	≥ 31
dU/dt [V/ μs] max.				
160	100	75	45	30
250	120	100	60	45
400	200	150	100	60
630	250	200	120	100
1000	300	250	160	140
1600	500	300	200	175
2000	750	650	450	250

Dissipation factor tgδ at +25°C max.

	C <sub>R</sub> ≤ 0,1μF	0,1μF ≤ C <sub>R</sub> ≤ 1μF	C <sub>R</sub> > 1μF
1 kHz	0,0006	0,0006	0,0006
10 kHz	0,0010	0,0020	
100 kHz	0,0030		

Operating voltage dependence on ambient temperature

### Construction of capacitors:

Metallized polypropylene film capacitors noninductive construction, cylindric shape, self-healing ability, Leads: tinned cooper wire Surface coating by yellow polyester film tape wrapped, epoxy resin sealed Flame retardant construction available upon request also UL 94 V-0

### Reference standards:

General specifications: IEC 60384-1, EN 130 000  
 Sectional specifications: IEC 60386-16, CECC 31 200

### Nominal capacitance C<sub>n</sub>:

see table  
 Other values on request. Nominal capacitance values are based on the E6 series in accordance to IEC 63 publ. or arbitrary values in capacitance range on request.

Tolerance of capacitance: ± 20% (M), ± 10% (K), ± 5% (J),  
 arbitrary tolerances on request

### Insulation resistance R<sub>i</sub>:

C ≤ 0,33μF R<sub>i</sub> min. 100 000 MΩ  
 C > 0,33μF R<sub>i</sub> min. 30 000 sec.

Time constant t<sub>is</sub>: t<sub>is</sub>=R<sub>i</sub> . C [sec;MΩ;μF]

### Rated voltage U<sub>R</sub> [DC/AC 50-60 Hz] - see table.

Climatic category: 55/100/56 (IEC 60068-1)

### Working Temperature range: - 55°C + +100°C

Test voltage between terminations: U<sub>t</sub>=1,6 × U<sub>R</sub> for 2 sec. at ambient temperature +25°C±5°C

Type	MKP 380S	MKP 381S	MKP 382S	MKP 383S	MKP 384S	MKP 385S	MKP 386S
Nominal voltage U <sub>R</sub> DC/AC	160 100	250 160	400 220 *	630 250 *	1000 400 *	1600 630	2000 700

## Maximum AC voltage dependence on frequency

## Upper operating temperature:

The max. temperature measured on the case surface at which the capacitor can work continually. MKP capacitors have the upper operating temperature +100°C, at any rate +105°C and corresponds to the upper category temperature

## Category voltage $U_c$ :

The maximum direct voltage, or the maximum r.m.s. voltage or the max. value of a voltage pulse, which may be continuously applied to the terminals of a capacitor till to the rated temperature. For the MKP up to +85°C  $U_c = U_r$ . For temperatures between +85°C and +100°C a decreasing factor of 1,25%/°C on the rated voltage  $U_r$  has to be applied.

## Pulse loading:

The capacitors charged which unsinusoidal voltage pulses with quick rise (high dU/dt) will be loaded with high current pulses. The current pulse must be limited in order to not overload or not destroy the internal contact and connections.

The limit of allowed current loading is given with allowed voltage rise in time dU/dt [V/μsec]. Minimum resistance in series with capacitor is  $R_s = U_r / C_r \times dU/dt$

$U_r$  - rated voltage [V]  
 $C_r$  - nominal capacitance [ $\mu F$ ]  
 $R_s$  - [Ω]

If the max. pulse voltage is less than the rated voltage, higher dU/dt values can be permitted  
 $dU_{op}/dt = dU_r/dt \times U_r/U_{op}$   
 $U_r$  - rated voltage  
 $U_{op}$  - working voltage amplitude

## Permissible AC Voltage:

It is the pure sine wave voltage that may be applied to the capacitor at the frequency up to 50/60 Hz. For the operation at higher frequencies refer to permissible AC voltage versus frequency graphs.

## Time constant tis:

The time constant is used to express the quality of insulation for higher capacities and is expressed in second with the following formula:

$$tis = R_s \cdot C [sec; M\Omega \cdot \mu F]$$
