

■ OUTLINE

The R1154Hxxxx series are CMOS-based voltage regulator (VR) ICs. The R1154Hxxxx has features of high output voltage accuracy and ultra-low supply current. A peak current limit circuit, a short current limit circuit, and a thermal shutdown circuit are built in the R1154Hxxxx series.

The regulator output voltage is fixed in the R1154HxxxB, while adjustable type is the R1154H001C. Output voltage accuracy is $\pm 2.0\%$.

Since the package for these ICs is the SOT-89-5 package with which high density mounting of the ICs on boards is possible.

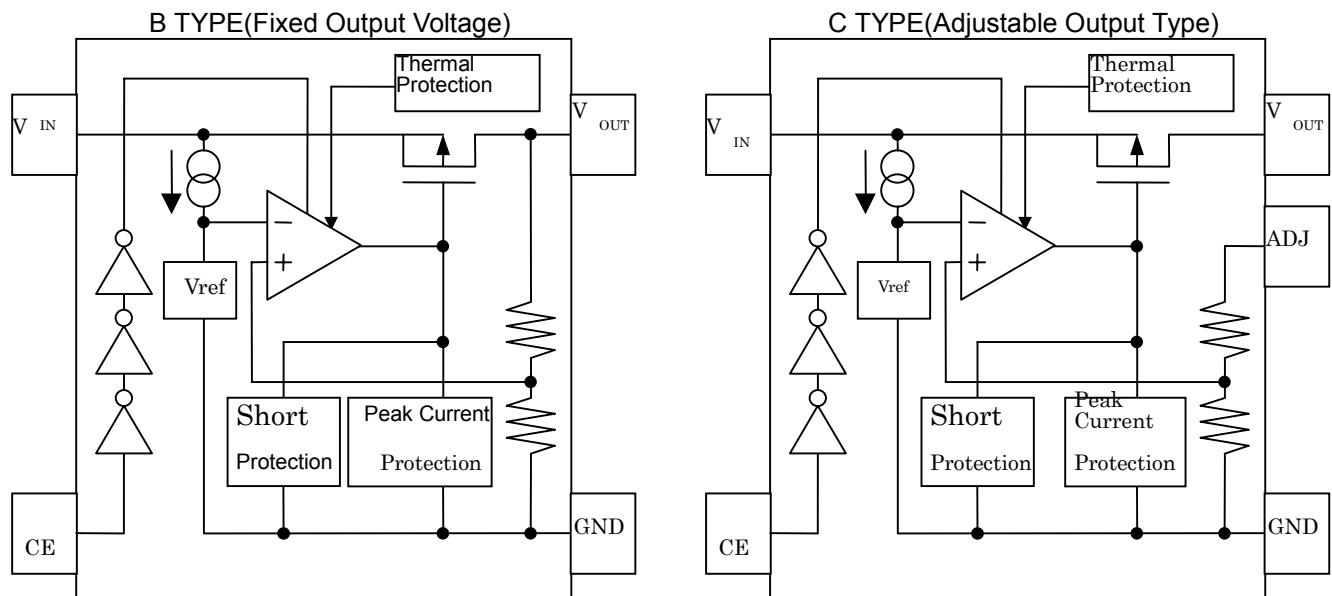

■ FEATURES

- Ultra-Low Supply Current Typ. 5.0 μ A
- Standby Current Typ. 0.1 μ A
- Input Voltage Max. 24V
- Wide Output Voltage Range Stepwise setting with a step of 0.1V in the range of 2.5V to 12.0V (xxxB)
or adjustable in the range of 2.5V to VIN or 24.0V(001C)
- High Output Voltage Accuracy $\pm 2.0\%$
- Output Current Min. 140mA (VIN=VOUT+2V; 2.5V Output type)
Min. 150mA (VIN=VOUT+2V; 3.0V Output type)
- Built-in Peak Current Limit Circuit, Short Current Limit Circuit, Thermal Shutdown Circuit

■ APPLICATIONS

- Power source for home appliances such as refrigerators, rice cookers, Electronic water warmers, etc.
- Power source for car audio equipment, car navigation system, and ETC system.
- Power source for notebook PCs, digital TVs, cordless phones, and LAN system.
- Power source for copiers, printers, facsimiles, and scanners.
- Power source for wireless equipment such as fish-finders, radar, RF unit, and transceivers.

■ SELECTION GUIDE

The output voltage can be selected at the user's request. The selection can be made with designating the part number as follows;

R1154XXXX-XX ← Part Number
 ↑ ↑ ↑ ↑
 a b c d

Code	Contents
a	Designation of package type; H: SOT89-5
b	Designation of output voltage: Adjustable:00 (Reference voltage =2.5V) Fixed: Stepwise Setting in the range from 2.5V to 12.0V
c	Designation of Output Type; B: Fixed Output Type C: Adjustable Output Type
d	Designation of Taping Type; T1,T2(SOT89-5)<-description of the direction of taping (Refer to Taping Specifications)

■ TECHNICAL NOTES

Phase Compensation

Phase Compensation of the R1154 Series has been made internally for stable operation even though the load current would vary. Therefore, without the capacitors, C_{IN} and C_{OUT} , the output voltage is regulated, however, for more stable operation, use capacitors as C_{IN} and C_{OUT} . Especially, if the input line is long and impedance is high, C_{IN} is necessary, moreover, if you use C_{OUT} , transient response will be improved. Recommended value is in the range from $0.1\mu F$ to $2.2\mu F$. Wiring should be made as short as possible.

Connect the capacitor, C_{IN} between V_{DD} pin and GND pin and C_{OUT} between V_{OUT} and GND as close as possible.

Thermal Shutdown

Thermal shutdown function is included in the R1154 Series, if the junction temperature is equal or more than +150°C (Typ.), the operation of regulator would stop. After that, when the junction temperature is equal or less than +125°C (Typ.), the operation of regulator would restart. Unless the cause of rising temperature would remove, the regulator repeats on and off, and output waveform would be like consecutive pulses.

Chip Enable Circuit

Do not make voltage level of chip enable pin keep floating level, or in between VIH and VIL. Unless otherwise, Output voltage would be unstable or indefinite, or unexpected current would flow internally.
