Note: ①Series with suffix "H" are heat sink mounting; series with suffix "A2S" are chassis mounting, with suffix "A4S" are DIN-Rail mounting, for example VRB2405LD-15WHR2A2S is chassis mounting of with heat sink, VRB2405LD-15WR2A4S is DIN-Rail mounting of without heat sink; If the application has a higher requirement for heat dissipation, you can choose modules with heat sink;
 ②Absolute maximum rating without damage on the converter;
 ③For dual-output-converter the given value is for one output (for both outputs the same value);
 ④The efficiency of "A2S" and "A4S" is approx. 2% lower for the protection of inverse polarity.

TEST CONFIGURATIONS

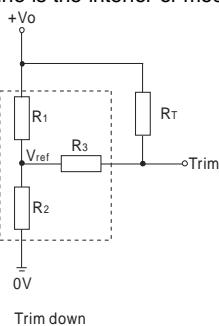

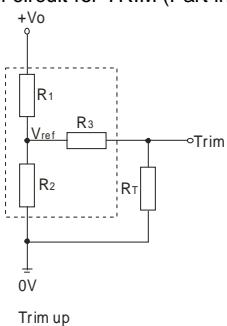

Input Reflected-Ripple Current Test Setup

Input reflected-ripple current is measured with an inductor Lin and Capacitor Cin to simulate source impedance.

TRIM APPLICATION & TRIM RESISTANCE

Application circuit for TRIM (Part in broken line is the interior of models)

Formula for resistance of TRIM

$$\text{up: } R_{T\downarrow} = \frac{aR_2}{R_2-a} - R_3 \quad a = \frac{V_{ref}}{V_o' - V_{ref}} \cdot R_1$$

$$\text{down: } R_{T\downarrow} = \frac{aR_1}{R_1-a} - R_3 \quad a = \frac{V_o' - V_{ref}}{V_{ref}} \cdot R_2$$

Note: Leave open if not used. Value for R1, R2, R3, and Vref refer to the above table 1. RT: Resistance of Trim. a: User-defined parameter, no actual meanings. Vo': The trim up/down voltage.

(Table 1)

DESIGN CONSIDERATIONS

① Recommended circuit

All the VRA_LD-15WR2 & VRB_LD-15WR2 Series have been tested according to the following recommended testing circuit before leaving factory. This series should be tested under load. Never be tested under no load (see Figure 4).

If you want to further decrease the input surge voltage and the output ripple, you can increase a capacitance properly or choose capacitors with low ESR .It should also be noted that the capacitance of filter capacitor must be proper. If the capacitance is too big, a startup problem might arise. For every channel of output, provided the safe and reliable operation is ensured, the recommended capacitance of its filter capacitor sees (Table 2).

EXTERNAL CAPACITOR TABLE (Table 2)

Single Vout (VDC)	Cout (μF)	Cin (μF)	Dual Vout (VDC)	Cout [#] (μF)	Cin (μF)
3.3/5	470	100	±5	220	100
12/15	220		±12/±15	100	
24	100		±24	47	

Note: # For each output.

② It is not recommended to increase the output power capability by connecting two or more converters in parallel. The product is not hot-swappable.

Note:

1. Min. load shouldn't be less than 5%, otherwise ripple maybe increase dramatically. Operation under minimum load will not damage the converter, however, they may not meet all specification listed.
2. Recommended Dual output models unbalanced load: $\leq \pm 5\%$, If the product operates $>\pm 5\%$, it may not be guaranteed to meet all specification listed, please contact our technical person for more detail.
3. Max. Capacitive Load tested at nominal input voltage and constant resistive load .
4. All specifications measured at $T_a=25^{\circ}\text{C}$, humidity<75%, nominal input voltage and rated output load unless otherwise specified.
5. In this datasheet, all the test methods of indications are based on our corporate standards.
6. All characteristics are for listed model, non-standard models may perform differently, please contact our technical person for more detail.
7. Contact us for your specific requirement.
8. Specifications subject to change without prior notice.
