

Description

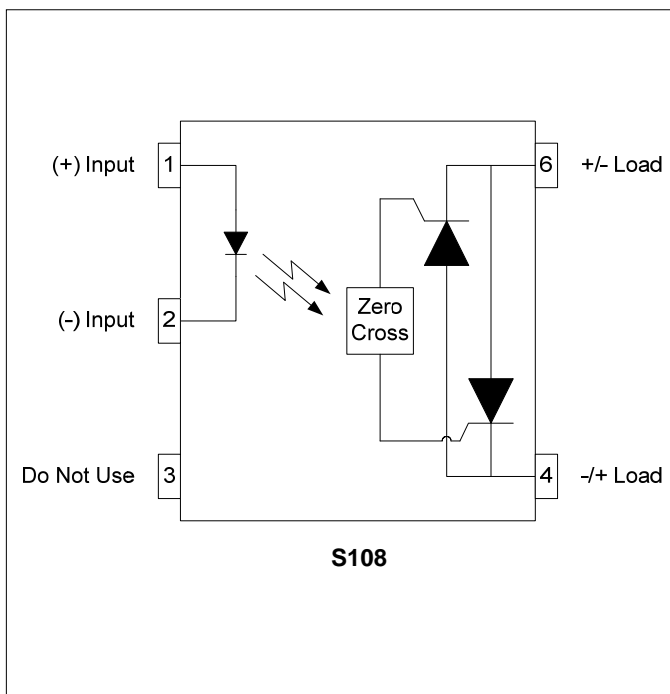

The S108 is a bi-directional, single-pole, single-throw, normally open multipurpose solid-state relay. The circuit is composed of one input IR LED which activates an optically coupled IC on the output that controls the firing angle of two back-to-back SCRs. This circuit assures no false triggering under most adverse conditions, and a tight zero-volt switching window not exceeding 5V. The S108 provides high peak load voltage (700V+) and high input-to-output isolation voltage (up to 5kV_{RMS}).

The S108 comes in a compact 6 pin DIP package, making it ideal for high-density board applications.

Applications

- Valve Control
- Solenoid Control
- Home Appliances
- Metering Equipment
- Heating Elements
- Gas Pump Control Circuitry

Schematic Diagram

Features

- Zero-Volt Cross Switching
- High Blocking Voltage (700V MIN)
- High Transient Immunity
- 0.8A Maximum Continuous Current
- Low Input Control Current
- Long Life / High Reliability
- RoHS / Pb-Free / REACH Compliant

Agency Approvals

UL/C-UL: File # E90096
 VDE: File # 40035191 (EN 60747-5-2)

Absolute Maximum Ratings

The values indicated are absolute stress ratings. Functional operation of the device is not implied at these or any conditions in excess of those defined in electrical characteristics section of this document. Exposure to absolute Maximum Ratings may cause permanent damage to the device and may adversely affect reliability.

Storage Temperature-55 to +125°C
 Operating Temperature-40 to +85°C
 Continuous Input Current50mA
 Transient Input Current500mA
 Reverse Input Control Voltage5V
 Input Power Dissipation40mW
 Total Power Dissipation800mW
 Solder Temperature – Wave (10sec).....260°C
 Solder Temperature – IR Reflow (10sec).....260°C

Ordering Information

Part Number	Description
S108	6 pin DIP, (50/Tube)
S108-H	5kV _{RMS} V _{ISO} , 6 pin DIP, (50/Tube)
S108-S	6 pin SMD, (50/Tube)
S108-HS	5kV _{RMS} , 6 pin SMD, (50/Tube)
S108-STR	6 pin SMD, Tape and Reel (1000/Reel)
S108-HSTR	5kV _{RMS} , 6 pin SMD, Tape and Reel (1000/Reel)

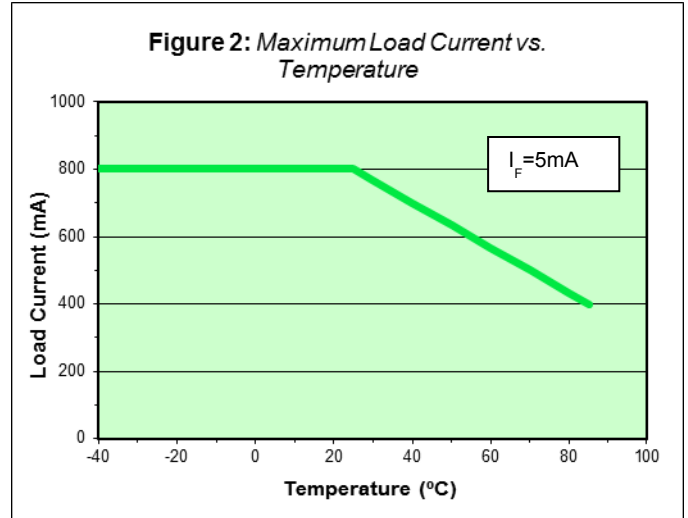

NOTE: Suffixes listed above are not included in marking on device for part number identification

Electrical Characteristics, $T_A = 25^\circ\text{C}$ (unless otherwise specified)

Parameter	Symbol	Min.	Typ.	Max.	Units	Test Conditions
Input Specifications						
LED Forward Voltage	V_F	-	1.2	1.5	V	$I_F = 10\text{mA}$
LED Reverse Voltage	BV_R	5	-	-	V	$I_R = 10\mu\text{A}$
Trigger (Must Operate) Current ¹	I_F	-	3	5	mA	$I_O = I_{O(\text{MAX})}$ [Resistive Load]
Junction Capacitance	C_J	-	5	-	pF	$I_F = 0\text{mA}$

Coupled Capacitance	C_{COUPLED}	-	2	-	pF	
Contact Transient Ratio	-	2,000	7,000	0	V/ μS	dV = 50V
Isolation Specifications						
Isolation Voltage (-H Option)	V_{ISO}	3750 5000	- -	- -	V_{RMS}	$\text{RH} \leq 50\%, t=1\text{min}$
Input-Output Resistance	$R_{\text{I-O}}$	-	10^{12}	-	Ω	$V_{\text{I-O}} = 500\text{V}_{\text{DC}}$

NOTES:

- 1) Resistive load. For inductive loads, higher drive current is recommended
- 2) Snubber circuits may be required for lower power factors
- 3) This is for static dV/dt.

S108 Performance & Characteristics Plots, $T_A = 25^\circ\text{C}$ (unless otherwise specified)

ZERO-VOLT SWITCHING

This solid state relay has been designed with a driver circuit that controls the operation of two back-to-back silicon controlled rectifiers (SCRs), each responsible for one half of the AC cycle. If an AC signal is examined, the turn on, turn off and zero-volt switching can be seen. Figure 3 shows a typical 60 HZ, 120VAC signal with a corresponding relay input signal:

Figure 3: Zero-Volt Switching Cycle

Figure 3 shows the sequence of zero-volt switching operation. At Stage 1, an input signal is applied to the relay. The relay will not turn on until the threshold voltage of 5V is reached. Once this point is reached (Stage 2), SCR #1 (designated as the SCR which controls positive AC voltage) turns on. However, SCR #1 only conducts for an instant, as the cycle quickly crosses zero. At this point (Stage 3), SCR #1 will turn off and SCR #2 (negative AC voltage) turns on. Likewise, at the next zero cross (Stage 4), SCR #2 will turn off and SCR #1 conducts again. Even though the input signal is terminated at Stage 5, the relay will continue to conduct (typical SCR behavior) until Stage 6, when SCR #1 crosses zero and ceases to conduct. Please note that turn on can likewise begin on the negative phase of the AC cycle with a -5V threshold, though only the positive phase is shown here.

S108 Solder Reflow Temperature Profile Recommendations
(1) *Infrared Reflow:*

Refer to the following figure as an example of an optimal temperature profile for single occurrence infrared reflow. Soldering process should not exceed temperature or time limits expressed herein. Surface temperature of device package should not exceed 250°C:

Process Step	Description	Parameter
A	Preheat Start Temperature (°C)	150°C
B	Preheat Finish Temperature (°C)	180°C
C	Preheat Time (s)	90 - 120s
D	Melting Temperature (°C)	230°C
E	Time above Melting Temperature (s)	30s
F	Peak Temperature, at Terminal (°C)	260°C
G	Dwell Time at Peak Temperature (s)	10s
H	Cool-down (°C/s)	<6°C/s

(2) *Wave Solder:*

Maximum Temperature: 260°C (at terminal)
 Maximum Time: 10s
 Pre-heating: 100 - 150°C (30 - 90s)
 Single Occurrence

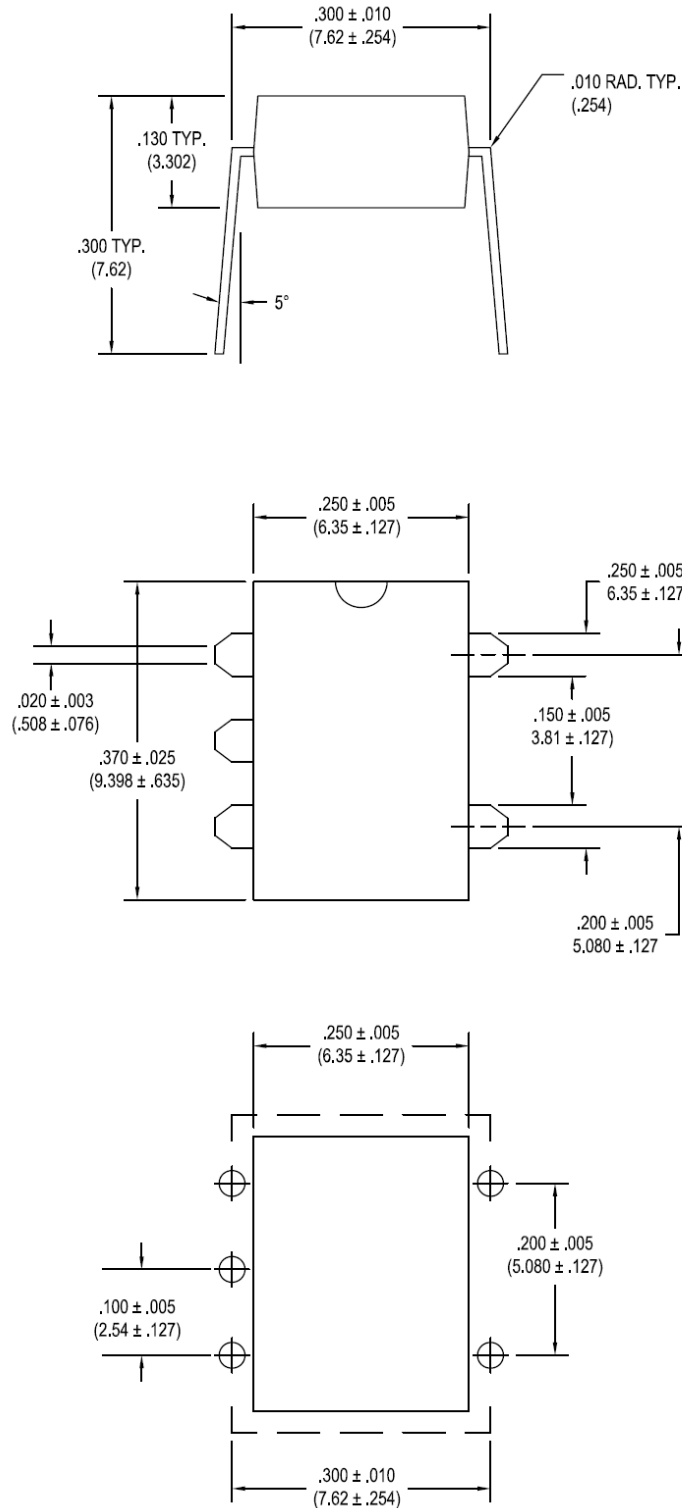

(3) *Hand Solder:*

Maximum Temperature: 350°C (at tip of soldering iron)
 Maximum Time: 3s
 Single Occurrence
